GIET UNIVERSITY GUNUPUR-765022

DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
BBSES1031	BASICS OF MECHANICS	3	0	0	3	

Pre -Requisite: Math and Physics

Course Educational Objective

CEO1: To apply the established engineering method to complex engineering problem.

CEO2: To understand the vectorial and scalar representation of forces and moments

CEO3: To evaluate the different forces exhibit in truss member.

CEO4: To obtain the knowledge on kinematics and kinetics of particle to analyze simple and practical problems

Course outcomes: At the end of the course, the student will be able to:

CO1 Determine the resultant force and moment for given force system.

CO2 Evaluate the forces in members of trusses, frames and problems related to friction.

CO3 Analyze the properties of surface in relation to centroid and moment of inertia

CO4 Calculate dynamic forces exerted on a rigid body.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2										1		
CO2	3	3										1	2	2
CO3	2	3												2
CO4	3	2										1		

Unit:1

[16 hours]

STATICS OF PARTICLES

Fundamental concepts and principles of engineering mechanics, resolution of forces, resultant of several concurrent forces, free body diagram. Principles of transmissibility, moment of a force, varignon's theorem equivalent system of forces, types of supports and corresponding reactions. Parallel forces in a plane and couple.

GIET UNIVERSITY GUNUPUR-765022

DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:2	[12 Hours]
ANALYSIS OF TRUSSES AND FRICTION	
Introduction to Truss - Analysis of Trusses - Method of joints, Method of sections. Laws of Friction - Angle of Friction-Angle of Repose-Ladder and Wedge Friction	
UNIT:3	[12 Hours]
PROPERTIES OF SURFACES	
Determination of first moment area of plane figures by integration – Determination of centroid of composite figures by using standard formula. Determination of second moment area of plane figures by integration - Parallel and perpendicular axis theorems - Determination of area moment of inertia of composite figures by using standard formula - Polar moment of inertia - Radius of gyration. Distributed forces in a plane.	
UNIT:4	[10 Hours]
DYNAMICS OF PARTICLES	
Rectilinear motion: Uniform velocity and uniformly accelerated motion, Newton second law-D'Alembert's principle and its applications- work and energy equation- Impulse and Momentum - Impact of elastic bodies.	
Teaching Methods: Chalk& Board, PPT	
Text Books:	
1. S.Timoshenko, and D.H.Young, "Engineering Mechanics", Tata Mc-Graw Hill Book,5 th edition	
2. S. S. Bhavikatti, "Engineering Mechanics", New Age International,6 th edition	
Ref. Books:	
1. Dr. Bansal.R.K, & Sanjay Bansal, "A Text book of Engineering Mechanics", Lakshmi publications.	
2. A.K.Tayal, "Engineering Mechanics Statics And Dynamics", Umesh Publications,14 th edition	
3. Rajasekaran.S, & Sankarasubramanian.G, "Engineering Mechanics", Vikas Publishing House Pvt Ltd,3 rd edition.	
4. Engineering Mechanics by Statics and Dynamics K.Vijaya Kumar Reddy and J Suresh Kumar, BS Publications, 3 rd edition.	

GIET UNIVERSITY GUNUPUR-765022

DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
BBS1172	ENGINEERING WORKSHOP	0	0	2	1									
Pre Requisite: Concept of Measurement and dimension.														
Course Educational Objectives:														
CEO1	To learn the different types of hand and machine tools for various industrial application.													
CEO2	To familiarize with the basic manufacturing processes and to study various tools and equipment used hands on training is given in different sections.													
CEO3	To know principle of metrology and measurement in industries.													
CEO4	To develop basic principles and devices involved in measuring and surface textures.													
Course Outcomes: <i>Upon successful completion of this course, students should be able to:</i>														
CO1	Understand various safety precautions and identify the use of different hand tools, machine tools and their operation.													
CO2	Demonstrate the process configuration and basic mechanism of different machines like Lathe, Shaper, Milling machine, Drilling machine, Grinding machine and CNC.													
CO3	Apply welding and fabrication knowledge and skills to meet expectation of various industries.													
CO4	Identify various measuring tools and device such as Sine bar, Slip gauge, Surface roughness tester, and express error of various measuring devices.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	1			1										
CO2	2			2										
CO3	1			3										
CO4	1			3										
Minimum:10 Experiment														
Unit 1														
Safety Precaution: To study the various Safety precautions in workshop.														
Fitting :														
Study of different hand tools and Machine tools used in fitting.														
Unit 2														
Machining:														
Study of various components and working principle of lathe machine														
Preparation of a cylindrical job by lathe (Facing, Taper turning, Step Turning, knurling)														
Study on Shaper and Milling Machine.														
Overview to CNC Lathe machine.														

GIET UNIVERSITY GUNUPUR-765022

DEPARTMENT OF MECHANICAL ENGINEERING

Unit 3

Welding Practice :

Hands on practice on Electric Arc Welding to prepare Lap Joint, Butt Joint, T Joint and Corner Joint.

Preparation of Lap joint with the help of Oxyacetylene Gas welding.

Unit 4

Measurement and Calibration :

Measurement of length, height and diameter by Vernier caliper and Micrometer

Angular measurement by using sine bar.

Measurement of flatness of surface plate by using spirit levels.

Measurement of surface roughness using surface roughness tester.

Calibration of LVDT using indicator / CRO

Calibration of load cell using electrical resistance strain gauge.

Calibration of thermocouples.

Teaching Methods: Chalk & Board, Hands on practice.

Text Book:

1. Elements of Workshop Technology, Vol. I and II by Hajra choudhary, Khanna Publishers (7th Edition 2011)

2. Workshop Technology by WAJ Chapman, Viva Books (5th Edition 1985)

Reference Books:

Workshop Manual by Kannaiah / Narayana, Scitech Publicaitons(P) Ltd. (3rd Edition 2015)

Mechanical measurement, instrumentation and control by A.K. sawhney and Punnet sawhney , Dhanpat Rai Publication (7th Edition 2017)

Engineering Metrology R.K. Jain, Khanna Publication (7th Edition 2018)

GIET UNIVERSITY GUNUPUR-765022

DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
	ENGINEERING GRAPHICS & DESIGN LAB	0	0	2	1	

Pre –Requisite:

Course Educational Objectives

CEO1	To enable students to acquire and use engineering drawing skills as a means of accurately and clearly communicating ideas, information and instructions
CEO2	To enable students to acquire requisite knowledge, techniques and attitude required for advanced study of engineering drawing and basic of AUTOCAD.

Course Outcomes: *Upon successful completion of this course, students should be able to:*

CO1	Able to prepare the orthographic projections of points and straight lines placed in various quadrants
CO2	Demonstrate the ability to draw orthographic projections of various solids.
CO3	Ability to draw and interpret the sectioned views of solids
CO4	To provide students with adequate knowledge and experience in preparing engineering drawings using AutoCAD

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	2			2										
CO2	2			3										
CO3	2			3										
CO4	3			3										

Unit 1
 Introduction: Drawing Instruments and their uses, BIS conventions, Types of line, Dimensioning line Conventions.
 Orthographic Projections :
 Introduction, Definitions - Planes of projection, reference line and conventions employed, Projections of points in all the four quadrants, Projections of straight lines (located in First quadrant/first angle only), True and apparent lengths, True and apparent inclinations to reference planes. 1-Sheet

Unit 2
 Orthographic Projections of Plane Surfaces (First Angle Projection Only):
 Introduction, Definitions–projections of plane surfaces–triangle, square, rectangle, rhombus, pentagon, hexagon and circle, planes in different positions by change of position method
 1-Sheet
 Projections of Solids (First Angle Projection Only) :
 Introduction, Definitions – Projections of right regular tetrahedron, hexahedron (cube), prisms, pyramids, cylinders and cones in different positions. 1-Sheet

Unit 3
 Sections and Development of Lateral Surfaces of Solids:
 Introduction, Section planes, Sections, Section views, Sectional views, Apparent shapes and True shapes of Sections of right regular prisms, pyramids, cylinders and cones resting with base on HP. 1 – Sheet

Unit 4
 AUTO CAD:
 Layout of the software, standard tool bar/menus and description of most commonly used toolbars, navigational tools. Co-ordinate system and reference planes. Definitions of HP, VP, RPP & LPP. Creation of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim,

SUBJECT CODE	TITLE OF THE SUBJECT											L	T	P	C	QP
	ENGINEERING MATHEMATICS – III											3	1	0	4	A
Pre -Requisite: Fundamentals of complex numbers, series																
Course Educational Objectives																
CEO1	To test the nature of complex function															
CEO2	To identify the different methods for complex integration															
CEO3	To analyze error by using different methods.															
CEO4	To know about different types of probability distributions.															
Course Outcomes: Upon successful completion of this course, students should be able to:																
CO1	To know Analytic function and their properties.															
CO2	To Evaluate Real Integral by using Series method															
CO3	To apply numerical methods in Engineering Mathematical Problems															
CO4	To investigate probability distribution problem to understand Binomial distribution, Poisson distribution and normal distribution.															
CO-PO & PSO Mapping

SCHOOL OF ENGINEERING AND TECHNOLOGY

DEPARTMENT OF MECHANICAL ENGINEERING

Binomial, Poisson and uniform distributions, Normal distribution, Random sampling, Estimation of Parameters (maximum likely hood method), Confidence intervals, Testing of hypothesis, Acceptance sampling, Regression and correlation analysis, fitting of straight line by least square method.

Teaching Methods: Chalk& Board

Text Books:

1. Advanced Engineering Mathematics by E. Kreyszig, Tenth Edition, Willey
2. Numerical Methods by Jain and Iyengar.

Ref. Books:

1. Higher Engineering Mathematics by BS Grewal : Khanna Publishers, New Delhi.
2. Higher Engineering Mathematics by B.V.Ramana, McGraw Hills Education
3. Numerical Methods by Dutta and Jena.

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

Accredited by NAAC with a CGPA of 3.28/4 at A+ Grade

Seven UG Programs CSE, ME, CHE, AEIE, ECE, BT & EEE Accredited by NBA

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	ENGINEERING THERMODYNAMICS	3	1	0	3	A								
Pre -Requisite: Fundamentals of Thermodynamics, Mathematics & Chemistry														
Course Educational Objectives														
CEO1	Students can Understand the principle and law of thermodynamics to analysis of different systems such as IC Engines, steam & Gas power plant, Refrigeration system and capable to analyze the parameters in various cycle etc.													
CEO2	Students can understand the basics of properties of pure substance like steam and its conditions and Application of Thermodynamics in vapour power cycles													
CEO3	Students can analyze the availability for open and closed systems, Maxwell and TDS equation in ideal gases.													
CEO4	Students can Apply the laws of thermodynamics to refrigerators, heat engines, heat pumps compressors and nozzles etc.													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Explain the basic concepts of system, control volume, thermodynamic properties, thermodynamic equilibrium, temperature, work and heat energy.													
CO2	Apply the laws of thermodynamics to refrigerators, heat engines, heat pumps compressors and nozzles etc.													
CO3	Evaluate properties of pure substances & Identify the methods to increase the efficiency of vapor, gas and refrigeration cycles.													
CO4	Interpret and apply the concept of entropy to thermodynamic systems.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	2												2
CO2	3	3												2
CO3	2	3												2
CO4	3	3	2											2
Avg.	2.75	2.75	0.5											2
SYLLABUS														
UNIT:1 Fundamental of thermodynamics						[12 Hours]								
Basic concepts & definition, scope of thermodynamics. Macroscopic & microscopic approach. Definition of fixed mass (closed) system & control volume (open) system, isolated system. Thermodynamic properties (extensive & intensive), state & its representation on a property diagram, process and its representation, cyclic process Characteristics of properties (point & path function), reversible & irreversible process, Quasistatic Process. Thermodynamic equilibrium.														

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

Accredited by NAAC with a CGPA of 3.28/4 at A+ Grade

Seven UG Programs CSE, ME, CHE, AEIE, ECE, BT & EEE Accredited by NBA

Gunupur - 765022, Dist.- Rayagada, Odisha, INDIA www.giet.edu

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

Energy transfer; Work transfer(definition & calculation), different modes of work Displacement work for various process, Free expansion work, Heat transfer, types of heat transfer, modes of heat transfer, basic laws in conduction, convection & radiation.

UNIT:2 Review of First and Second laws: [13 Hours]

First law of thermodynamics, formal statement (using cyclic process) first law for processes of fixed masses (closed system) Introduction of internal energy, enthalpy as thermodynamic properties Definition of sp.heats (C_p & C_v) and their use in calculation of internal energy & enthalpy with emphasis on ideal gas.

Application of first law to control volume (Steady Flow); nozzle, diffuser, compressor, turbine, throttling device. First law analysis of unsteady flow control volumes, Second law of thermodynamics, Kelvin Planck & Clausius statements, Carnot cycle. Reversible & irreversible engines and their efficiency (Thermal and maximum Efficiency)

UNIT:3 Pure substance & Vapour Power Cycles: [12 Hours]

Properties of pure substance, P v, T s, h s diagram for steam, Steam properties, Introduction to steam table with respect to specific volume, pressure, temperature, enthalpy & entropy, Mollier Diagram.

The Carnot vapor cycle and its limitations, The Rankine cycle, Means of increasing the Rankine cycle efficiency, The reheat cycle, The regenerative feed heating cycle, Cogeneration (Back pressure and Pass-out turbines), Combined cycle power generation systems, Binary vapour cycles.

UNIT:4 Concepts of Entropy: [10 Hours]

Entropy concepts, Clausius inequality, Entropy Principle. Entropy generation, Entropy balance for closed systems and steady flow systems, Available energy, Quality of energy, Availability for non flow and flow process, Irreversibility, Exergy balance, Second law efficiency.

Teaching Methods: Chalk& Talk, PPT, Video Lectures, Demonstrative models

Text Books:

1. Cengel. Y and M.Boles, "Thermodynamics - An Engineering Approach", 7th Edition, Tata McGraw Hill, 2016.
2. Engineering Thermodynamics by Gordon Rogers and Yon Mayhew, Pearson Education Ltd, 4th Edition.
3. Nag,P.K., "Engineering Thermodynamics", 4thEdition, Tata McGraw-Hill, New Delhi, 2008.
4. Rathakrishnan. E., "Fundamentals of Engineering Thermodynamics", 2nd Edition, Prentice-Hall of India Pvt. Ltd, 2006

Ref. Books:

1. Holman.J.P., "Thermodynamics", 3rd Edition, McGraw-Hill, 2012.
2. Applied Thermodynamics by P.L.Ballaney, Khanna Publishers
3. Steam Tables in SI Units by Ramalingam, Scitech publication.

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	MECHANICS OF SOLIDS	3	0	0	3	A								
Pre -Requisite: Basic mathematics and Engineering Mechanics														
Course Educational Objectives														
CEO1	To define the concept of load, stress, strain, stress vs strain diagram and elastic constant relationship.													
CEO2	To Solve engineering problems through the relationship between stress and strain.													
CEO3	To determine shear force and bending moment diagrams for variously loading conditions													
CEO4	Learn to solve problems for calculation of torsion and Twisting moment in solid and hollow circular shafts.													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Find the basic mechanical properties of material, tension, compression, torsion, bending and combined stress using the fundamental concepts of stress, strain and elastic behavior of materials.													
CO2	Apply the stress- strain distributions, diagrammatically representation of shear force & bending moment for different beams under various load conditions by using suitable methods.													
CO3	Analyze the slope and deflections for different cross sectional beams and columns, torsion effect for shaft and springs under different load conditions.													
CO4	Solve the engineering problems by applying mechanical engineering concepts and theories.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	2												
CO2	2	2												1
CO3	2	3												
CO4	2	2												1
Avg.	2.25	2.25												0.5
SYLLABUS														
UNIT:1 [14 Hours]														
Concept of stress: Load, Stress, Hook's law, poisson's ratio, Stress-strain diagram, working stress, Factor of safety, Principle of St. Venant , Principle of Superposition, Shear stress, Complimentary shear stress, Compound Bars, Shear strain, Modulus of rigidity, Modulus of elasticity, Relationship among elastic constants. Strain energy, Resilience, Impact load. Analysis of axially loaded members: Composite bars in tension and compression, Temperature stresses in composite rods, concept of statically indeterminate problems.														

GIET UNIVERSITY GUNUPUR, ODISHA

Gunupur - 765022, Dist.- Rayagada, Odisha, INDIA www.giet.edu

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:2	[14 Hours]
Thin Cylinders: Thin Cylinders and Shells under internal pressure, wire winding of thin cylinder. Biaxial state of stress: Plane stress, principal plane, principal stress, Mohr's circle for biaxial stress, Calculation of Principal stresses from principal strain. Shear force and Bending moment diagram : Concept of Shear Force and Bending Moment, Types of load and types of support, Support reactions, Relationship between bending moment and shear force, point of inflection, Shear force and bending Moment Diagram.	
UNIT:3	[10 Hours]
Bending of Beams: Theory of simple bending, Bending stress, Shear stresses in beams, Distribution of shearing stress over a rectangular section, triangular section, I-section and T-section. Deflection of Beams: Differential equation of the elastic line, slope and deflection of beams by integration method	
UNIT:4	[8 Hours]
Torsion : Torsion in solid and hollow circular shafts, Twisting moment, Strain energy in shear and torsion, Strength of solid and hollow circular shafts, Strength of shafts in combined bending and twisting, Close- coiled helical spring.	
Teaching Methods: Chalk& Board	
Text Books:	
1. Elements of Strength of Materials by S.P.Timoshenko and D.H.Young, Affiliated East West Press.	
2. Strength of Materials by S.S.Rattan, Tata Mc Graw Hill	
Ref. Books:	
1. Mechanics of Materials by Beer and Johnston, Tata McGraw Hill.	
2. Mechanics of Materials by R.C.Hibbeler, Pearson Education	
3. Mechanics of Materials by William F.Riley, Leroy D.Sturges and Don H.Morris, Wiley Student Edition

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	MATERIAL SCIENCE	3	0	0	3	A								
Pre -Requisite: Solid physics														
Course Educational Objectives														
CEO1	To familiarize with the concept crystal structures, bonding of solids and their influence on properties of materials													
CEO2	To acquaint with the construction of phase diagrams and describe the phase relationship with variables i.e. chemical composition, pressure, temperature etc													
CEO3	To develop a fundamental understanding of the relationships between Composition-Structure-property –performance and processing of material													
CEO4	To develop an understanding of the processes occurring in metals during heating that influences the microstructure and properties													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Understand the atomic arrangement in different crystallographic planes and directions and their influence on bonding strength of metals.													
CO2	Ability to construct the phase diagram and interpret the phase relationship effect on properties of materials.													
CO3	Analyze the effect of heat treatment on micro structural change on properties of different materials.													
CO4	Apply the fundamental concepts to develop new materials for suitable applications													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2

CO2	3	2												
CO3	3	3												
CO4	2	2											2	
Avg.	2.5	2.75											0.75	
SYLLABUS														
UNIT:1 [16 Hours]														
Classification of Engineering Materials, Characteristic property of metals, bonding in solids, ionic, covalent and metallic bond, Crystal systems, crystallographic planes and directions, atomic packing efficiency, crystal imperfection and voids in common crystal systems. Solidification of pure metal, Homogeneous and heterogeneous nucleation processes, cooling curve, concept of super cooling, microstructures of pure metals, solidification of metal in ingot mould.														
UNIT:2 [12 Hours]														
Concept of alloy formation, types of alloys, solid solutions, factors governing solids														

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

Accredited by NAAC with a CGPA of 3.28/4 at A+ Grade

solubility viz. size factor, valence factor, crystal structure factor and chemical affinity factor; order-disorder transformation. Binary phase diagrams a) Isomorphism system, (b) Eutectic system, (c) Peritectic system, (d) Eutectoid system and (e) Peritectoid system. (f) Allotropic transformation. Lever rule and its application, Interpretation of solidification behaviors and microstructure of different alloys belonging to those systems, Effect of non-equilibrium cooling, coring and homogenization. Iron-cementite and iron-graphite phase diagrams,	
UNIT:3	[12 Hours]
Equilibrium cooling behaviour of hypo, eutectoid, hyper eutectoid steels. microstructure and properties of different alloys. Heat treatment of steels, i.e. annealing, normalizing, hardening and tempering; microstructural effects brought about by these processes and their influences on mechanical properties; Concept of T.T.T diagram, factor affecting hardenability. Alloy steels: Stainless steel, tool steel, HSS, high strength low alloy steel, heat treatment, properties, microstructure and applications. Types of cast irons, their microstructures and typical uses. Concept of plastic deformation of metals, yield point phenomena, CRSS, Recovery recrystallization and grain.	
UNIT:4	[10 Hours]
Optical properties of Materials: Scattering, Refraction, Theory of Refraction and absorption, Atomic Theory of optical properties. Lasers, Optical fibres- Principle, structure, application of optical fibres. Plastic-: Thermosetting and thermoplastics. Ceramics: Types, structure, Mechanical properties, application Composite Materials: Agglomerated Materials: Cermets .Reinforced Materials: Reinforced Concrete. Glass fiber reinforced plastics, Carbon fibre reinforced plastics, fibre reinforced plastics, laminated plastic sheets. Teflon, Properties of composites, Metal matrix composites, manufacturing procedure for fiber reinforced composite. Introduction to Nano-materials	
Teaching Methods: Chalk& Talk,PPT	
Text Books:	
1. Introduction to physical metallurgy – Sydney Avner 2 Fundamentals of materials science and engineering W. Callister

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	OPTIMIZATION ENGINEERING	3	0	0	3	A								
Pre -Requisite: Basics of Mathematics, matrix, partial differential equation addition of linear equations														
Course Educational Objectives														
CEO1	To introduce the students how to use variables for formulating complex mathematical models in management science, industrial engineering and transportation science													
CEO2	To provide students with opportunity using various software package for solving liner programming and integer programming models													
CEO3	To introduce the students to use of basic methodology for solution of linear programs and integer programs													
CEO4	To introduce the students to advance methods for large scale transportation and assignment problems													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Analyze, formulate and solve linear programming problems using appropriate techniques.													
CO2	Conduct and interpret post-optimal analysis and explain the application of transportation & assignment problems													
CO3	Develop mathematical skills to analyze and solve integer programming problem Queueing and Game theory.													
CO4	Communicate ideas, explain procedures and interpret solution for Non-linear programming problems													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs

SUBJECT CODE	COURSE TITLE	L	T	P	C	QP								
	MECHANICS OF SOLIDS LABORATORY	0	0	2	1									
Pre -Requisite: Mechanics of Solid														
Course Educational Objectives														
CEO1	In this laboratory, students will have the opportunity to apply loads to various materials under different equilibrium conditions													
CEO2	The student will perform tests on materials in tension, compression, torsion, bending, and impact													
CEO3	The machines and equipment used to determine experimental data include universal testing machines, torsion equipment, spring testing machine, compression testing machine, impact tester, hardness tester, etc													
CEO4	Data will be collected using Dial indicators, extensometers, strain gages and strain indicator equipment, as well as load and strain readouts on the machinery and graphing capabilities to print relevant plots for analysis													
CEO5	Analysis of subsequent data obtained from the performed test and to present the results in a professionally prepared report													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Conduct tension, compression & bending test on UTM.													
CO2	Perform impact & fatigue test of mild steel specimen.													
CO3	Determine the Brinell, Rockwell and Vicker's hardness of different material.													
CO4	Measure strain by using strain gauge and strain rosette.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs

	FLUID MECHANICS & HYDRAULICS MACHINES	3	0	0	3	A								
Pre -Requisite: Physics, Thermodynamics, Mechanics, Mathematics														
Course Educational Objectives														
CEO1	To know the concept of fluid and its properties, manometer, hydrostatic forces acting on different surfaces and also problem solving techniques.													
CEO2	To relate the basic laws of fluids, flow patterns, viscous flow through pipes and their corresponding problems.													
CEO3	To analyze the hydrodynamic forces acting on vanes and their performance evaluation													
CEO4	To evaluate of the importance, function and performance characteristics of hydro machinery													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Understand the basic properties and characteristics of incompressible fluid.													
CO2	Apply basic fundamental theorems governing fluid flows i.e., continuity, energy and momentum and flow through pipes.													
CO3	Compare the concept of measurement of different fluid properties using various types of equipments like manometer, venturimeter, orificemeter, pitot-tube, siphon etc.													
CO4	Analyze the working of hydraulic machines and evaluate the performance of hydraulic turbines and pumps.													
CO-PO & PSO Mapping

floatation, Archimedes' principle, stability of immersed and floating bodies, determination of metacentric height.
UNIT:2 (14 Hours) Fluid kinematics: Introduction, description of fluid flow, classification of fluid flow. Reynolds number, Acceleration of fluid particles, flow rate and continuity equation, differential equation of continuity, Mathematical definitions of irrotational and rotational motion. Circulation, potential function and stream function. Flow net Fluid dynamics : Introduction, Euler's equation along a streamline, energy equation, Bernoulli's equation and its application to siphon, venturimeter, orificemeter, pitot tube. Flow in pipes and ducts: Loss due to friction, Minor energy losses in pipes Flow through nozzles.
UNIT:3 (13 Hours) Impact of Jet: Introduction, Force exerted by the jet on a stationary and movable plate (vertical, inclined, curved) Hydraulic turbines: Classification, Impulse and Reaction turbine; Tangential, Radial and axial turbine. Impulse turbine, Pelton wheel, bucket dimensions, number of buckets in pelton wheel, efficiency and performance curves. Reaction Turbines: Francis turbine and Kaplan turbine, velocity triangle and efficiencies, performance curve. Function of draft tube and casing cavitation
UNIT:4 (8 Hours) Centrifugal Pump:constructional features, vane shape, velocity triangles, Efficiencies, Pump Characteristic, NPSH and Cavitation. Positive displacement pumps:Reciprocating Pump, Working principle, Discharge, work done and power requirement, Slip, Indicator diagram
Teaching Methods: Chalk& Talk/ PPT/Video Lectures/Demonstration
Text Books 1. Fluid Mechanics - Frank M. White II 2. Fluid Mechanics - Yunus Cengel and John Cimbala 3. Introduction To Fluid Mechanics And Fluid Machines - S Chakraborty 4. Fluid Mechanics and Hydraulic Machines, Modi & Seth

	MANUFACTURING SCIENCE -I	3	0	0	3	A								
Pre -Requisite: Metallurgy														
Course Educational Objectives														
CEO1	To study basic definitions associated with casting terminology, its classification and various steps involved in it.													
CEO2	To understand the application of the different joining techniques, and be able to select an appropriate technique according to a specific requirement.													
CEO3	To understand the fundamentals of metal working process.													
CEO4	To give the basic concept of the powder metallurgy processing and also the theory and technology of powder production, consolidation and sintering.													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Select materials, types and allowances of patterns used in casting and analyze the components of moulds.													
CO2	Design core, core print and gating system in metal casting processes													
CO3	Compared and contrast arc, gas, solid state and resistance welding processes.													
CO4	Develop process for metal forming processes using plasticity principles and various techniques used in power metallurgy.													
CO-PO & PSO Mapping

SYLLABUS														
UNIT:1 [10 Hours]														
Metal Casting Processes: sand mold making procedure. Patterns: Pattern materials, pattern allowances, types of pattern. Molding materials: Molding sand composition, sand preparation, sand properties and testing, Sand molding processes. Cores: Types of cores, core prints, chaplets, and chills. Design of Gating systems: Melting practice: Cupola furnace, solidification, defects in castings and their remedies, Shell molding, precision investment casting, permanent mold casting, die casting, centrifugal casting, continuous casting, Advantages and limitations.														
UNIT:2 [10 Hours]														
Welding Process: Principles of welding, brazing and soldering, Classification of Welding Processes, gas welding and cutting process, equipment. Arc welding power source and consumables. Resistance welding: Principle and equipments, resistance spot welding, resistance seam welding, electro slag welding, forge welding. Modern

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

welding methods like plasma arc, laser beam, Electron beam, Ultrasonic, Explosive and friction welding. Destructive and Non destructive testing of casting and welding.
UNIT:3 [12 Hours] Metal Forming Processes: Nature of plastic deformation, hot working and cold working .Principles of rolling, roll passes, roll pass sequences. Forging: Forging operations, smith forging, drop forging, press forging, forging defects. Extrusion and Sheet metal operations: Extrusion principle, hot extrusion, cold extrusion, wire drawing, swaging, tube making. Sheet metal operations: Press tools operations, shearing action, drawing dies, spinning, bending, stretch forming, embossing and coining.
UNIT:4 [10 Hours] Powder Metallurgy: Powder manufacturing, compaction and sintering processes. Advantages and applications of Powder Metallurgy. Brief introduction to explosive forming, coating and deposition methods. Plastics: Introduction, Raw material for plastics, Properties of plastics, types, Thermosetting plastics, Thermoplastics, Moulding compounds.
Teaching Methods: Chalk& Board/ PPT/Video Lectures/Lecture by Industry Expert
Text Books: 1. Manufacturing Technology-Foundry, Forming and Welding - P.N. Rao, Tata McGraw Hill, 2. Manufacturing Science - Ghosh A; Mallik A.K. Affiliated East-West Press Pvt. Ltd., New Delhi

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	KINEMATICS OF MACHINERY	3	0	0	3	A								
Pre -Requisite: Basic of Mechanics (Statics) topics like: Equilibrium of forces, Free body diagram, friction and D'Alemberts principle														
Course Educational Objectives														
CEO1	To obtain an idea of Mechanisms, basic of methodology of machines													
CEO2	Apply knowledge to the selection of proper techniques and processes for velocity and acceleration using graphical and analytical techniques													
CEO3	Basic knowledge of different types of Piston effort, force acting along the connecting rod, Crank effort, Turning moment on crank - shaft													
CEO4	Analyze and study of various types of clutches and pivots, dynamometers, Various gear trains and classification of brakes etc													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Recognize the basic of elements of mechanisms and describe, understand differentiate between mechanisms, solve for mobility with synthesis of mechanisms.													
CO2	Apply the concept of mechanism to interpret and examine the velocity and acceleration of different linkages in mechanisms by analytical and graphical methods.													
CO3	Analyze the effect of friction and estimate the loss of power due to friction between moving elements (i.e., Gears, clutches, brakes, belt drives etc...)													
CO4	Propose for the engineering challenges regarding human needs in daily life about machines and systems which are possible due to the design of machines.													
CO-PO & PSO Mapping

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

Links, Velocity of Rubbing, Slider - Crank Mechanism, Crank and Slotted Lever Mechanism.
UNIT:2 (No of Hours10) PLANE MOTION OF BODY : Instantaneous centre, Notation, Number of I - Centres, Kennedy's theorem, Locating I - Centres, Angular velocity by I - Centre Method ACCELERATION ANALYSIS: Acceleration, Four-Link Mechanism, , slider-Crank Mechanism Angular acceleration of Links, Acceleration of Intermediate and offset points, Coriolis acceleration component, Crank and slotted lever Mechanism.
UNIT:3 (No of Hours10) KINEMATIC SYNTHESIS: Stages of synthesis-Concepts of type, Number and dimensional synthesis - Tasks of dimensional synthesis, Concepts of function generation, Rigid body guidance and path generation, Freudenstein equation for function generation using three precision points. Cams: Definitions of cam and followers – their uses – Types of followers and cams – Terminology – Types of follower motion - Uniform velocity, Simple harmonic motion and uniform acceleration and retardation. Maximum velocity and maximum acceleration during outward and return strokes, Graphical synthesis of cam profile
UNIT:4 (No of Hours12) GEARS : Introduction, Classification gear terminology, Law of Gearing, Velocity of Sliding, Forms of Teeth, Cycloidal Profile Teeth, Involute Profile Teeth, Path of contact, Arc of contact, Number of pairs of Teeth in contact, Interference in Involute Gears, Minimum number of Teeth, Interference between Rack and Pinion, Undercutting, Comparison of Cycloidal and Involute tooth forms. GEAR TRAINS: Introduction, simple Gear Train, Compound Gear Train, Reverted Gear train, Planetary or Epicyclic Gear Train, Analysis of Epicyclic Gear Train, Torques in Epicyclic Trains. Tabular and Algebraic Methods
Teaching Methods: Chalk& Board/ PPT/Video Lectures/Lecture by Industry Expert
Text Books 1. Theory of Machines /S.S.Rattan – Tata McGraw Hill Publishers. 2. Theory of Mechanisms and Machines by Ghosh and Mallik

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	Q P								
	QUALITY CONTROL AND RELIABILITY	3	0	0	3	A								
Pre -Requisite: Basics of Probability and Statics														
Course Educational Objectives														
CEO1	Introduces students to concepts and methods of modern statistical quality control													
CEO2	To apply standard quality control tools. They learn the theoretical statistical concepts that justify the use of particular quality control tools in particular situations													
CEO3	To learn theory and methods for analyzing the performance of different quality control tools													
CEO4	Use of appropriate software for statistical and quality analysis is taught, and is necessary for successful completion of some homework assignments. Issues of ethics and professional responsibility and their relation to product quality are discussed													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Understand the concepts of quality control, improvement and management.													
CO2	Relevant with sampling by attributes, operating characteristics curves and ISO standard set attributes in sampling plans													
CO3	Apply quality engineering tools to the design of products and process controls													
CO4	Recognize the need of reliability and carry out reliability data analysis													
CO-PO & PSO Mapping

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	OPTIMIZATION ENGINEERING	3	0	0	2	A								
Pre -Requisite: Basics of Mathematics, matrix, partial differential equation addition of linear equations														
Course Educational Objectives														
CEO1	To introduce the students how to use variables for formulating complex mathematical models in management science, industrial engineering and transportation science													
CEO2	To provide students with opportunity using various software package for solving liner programming and integer programming models													
CEO3	To introduce the students to use of basic methodology for solution of linear programs and integer programs													
CEO4	To introduce the students to advance methods for large scale transportation and assignment problems													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Analyze, formulate and solve linear programming problems using appropriate techniques.													
CO2	Conduct and interpret post-optimal analysis and explain the application of transportation & assignment problems													
CO3	Develop mathematical skills to analyze and solve integer programming problem Queueing and Game theory.													
CO4	Communicate ideas, explain procedures and interpret solution for Non-linear programming problems

SUBJECT CODE	COURSE TITLE	L	T	P	C	QP
	FLUID MECHANICS AND HYDRAULICS MACHINES LABORATORY	0	0	2	1	

Pre -Requisite: Mathematics, Fluid Mechanics and Hydraulic Machines

Course Educational Objectives

CEO1	To know the concept of fluid and its properties, manometer, hydrostatic forces acting on different surfaces and also problem solving techniques.
CEO2	To relate the basic laws of fluids, flow patterns, viscous flow through ducts and their corresponding problems.
CEO3	To analyze the hydrodynamic forces acting on vanes and their performance evaluation
CEO4	To evaluate of the importance, function and performance characteristics of hydro machinery

Course Outcomes: Upon successful completion of this course, students should be

CO1	Discuss the differences among measurement techniques, their relevance and applications.
CO2	Explain the condition of floating and submerging of any object in water.
CO3	Analyze the various parameters of flow through Orifice, Venturimeter
CO4	Calculate the performance analysis of turbines and pumps that can be used in power plants.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs

SUBJECT	TITLE OF THE SUBJECT	L	T	P	C	QP
	KINEMATICS OF MACHINERY LABORATORY	0	0	2	1	

Pre Requisite: Physics , Mechanics, Theory of Machine

Course Educational Objectives

CEO1	To understand the concept of machines, mechanisms and elated terminologies
CEO2	Discriminate mobility (number of degrees-of-freedom). Enumeration of rigid links and types of joints within mechanisms. To make the students become familiar and understanding of the most commonly used mechanisms (4-bar, 6-bar linkages, and cams).
CEO3	To understand the Principles and working of various straight line motion mechanisms
CEO4	To develop and analyze cam profiles for different mechanisms.

Course Outcomes: *Upon successful completion of this course, students should*

CO1	Develop the design concepts of different types of mechanism with lower pairs and higher pairs
CO2	Analyze the velocity and acceleration of links of different mechanisms.
CO3	Study and analyze the gear profiles and gear trains.
CO4	Synthesis of the different mechanisms

CO-PO & PSO Mapping

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

Subject Code	TITLE OF THE SUBJECT	L	T	P	C	Q P
	DYNAMICS OF MACHINERY	3	0	0	3	A

Pre -Requisite: Basic Mathematics, Physics , Mechanics

Course Educational Objectives

CEO1	To equip the student with fundamental knowledge of dynamics of machines so that student can appreciate problems of dynamic force balance, transmissibility of forces, isolation of systems, vibrations
CEO2	Develop knowledge of analytical and graphical methods for calculating balancing of rotary and reciprocating masses
CEO3	Develop understanding of vibrations and its significance on engineering design.
CEO4	Develop understanding of dynamic balancing, flywheel analysis, gyroscopic forces and moments.

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Classify the steering mechanisms and gyroscopic effects on various dynamic objects.
CO2	Develop a cam profile to meet desired needs within realistic constraints, calculate the inertia forces in reciprocating and rotating masses along with turning moments in flywheels.
CO3	Analyze static and dynamic balancing of rotating and reciprocating masses, classify the various kinds of governors, recognize the effect of controlling force.
CO4	Analyze the effect of vibration in desired systems; determine the natural frequency of a vibration system.

Accredited by NAAC with a CGPA of 3.28/4 at A+ Grade

Seven UG Programs CSE, ME, CHE, AEIE, ECE, BT & EEE Accredited by NBA

Gunupur - 765022, Dist.- Rayagada, Odisha, INDIA www.giet.edu

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

Mechanisms with lower pairs: Motor Vehicle Steering Gears - Davis Steering Gear & Ackermann Steering Gear, Hooke's Joint.
UNIT:2 (12 Hours) Gyroscopes – effect of precession – motion on the stability of moving vehicles such as motorcycle – motorcar – aeroplanes and ships. Governors: Types of governors - Watt, Porter and Proell governors. Spring loaded governors – Hartnell and Hartung with auxiliary springs. Sensitiveness, isochronisms and hunting – stability – effort and power of the governors.
UNIT:3 (10 Hours) Friction: pivots and collars – uniform pressure, uniform wear – friction circle and friction axis. Clutches – Types – Single plate, multi-plate and cone clutches. Brakes and Dynamometers: Types of brakes: Simple block brake, band and block brake-internal expanding shoe brake-effect of braking of a vehicle. Dynamometers – absorption and transmission types. General description and methods of operation
UNIT:4 (16 Hours) Balancing : Balancing of rotating masses- Primary, Secondary, and higher balancing of reciprocating masses. Analytical and graphical methods. Unbalanced forces and couples. Examination of “V” and multi cylinder in-line and radial engines for primary and secondary balancing- locomotive balancing – Hammer blow – Swaying couple – variation of tractive effort. Vibrations: Free Vibration of mass attached to vertical spring – Transverse loads – vibrations of beams with concentrated and distributed loads. Dunkerly's method – Raleigh's method. Whirling of shafts – critical speed – torsional vibrations –Free vibrations with viscous damping, Logarithmic Decrement.
Teaching Methods: Chalk& Board/ PPT/Video Lectures/Lecture by Industry Expert
Text Books 1. Theory of Machines, S.S.Rattan. 2. Theory of Machines, R.K.Bansal (Lakshmi publications)

Pre Requisite: Mathematics, Mechanics of Solid														
Course Educational Objectives														
CEO1	To teach students how to apply the concepts of stress analysis, theories of failure and able to do tolerance analysis and specify appropriate tolerances for machine design applications by using data book.													
CEO2	To analyze and design structural joints.													
CEO3	To teach students how to apply mechanical engineering design theory to identify and quantify machine elements in the design of commonly used mechanical systems													
CEO4	To analyze and design mechanical springs.													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Understand component behavior subjected to loads and identify the failure criteria.													
CO2	Design the cotter , knuckle , riveted and welded joints.													
CO3	Develop the design of keys , shaft and couplings.													
CO4	Explain the design procedure of lever and power screw.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	2												1
CO2	2	2	2											1
CO3	1	2	3											
CO4	2	2	2											1
Avg.	2	2	1.75											0.75
SYLLABUS														
UNIT:1 [16 Hours] Mechanical engineering design: Introduction to design procedure, Stages in design, Code and Standardization, Interchangeability, Preferred numbers, Fits and Tolerances, Use of Data books. Fundamentals of Machine Design: Types of load, Modes of failure, factor of safety concepts, Theories of Failure, concept and mitigation of stress concentration, Fatigue failure and curve, endurance limit and factors affecting it, Notch sensitivity, Goodman, Gerber and Soderberg criteria														
UNIT:2 [12 Hours] Machine Element Design: Design of Joints: Rivets, welds based on different types of loading, Boiler joints, cotter joints and knuckle joints														

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

Accredited by NAAC with a CGPA of 3.28/4 at A+ Grade

Gunupur - 765022, Dist.- Rayagada, Odisha, INDIA www.giet.edu

SCHOOL OF ENGINEERING AND TECHNOLOGY

DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:3	[12 Hours]
Design of Keys, Shaft and Couplings: Classification of keys and pins, Design of keys and pins, Design of shafts: based on strength, torsional rigidity and fluctuating load. Design of couplings: Rigid coupling muff ,split muff and flange coupling , Flexible coupling	
UNIT:4	[10 Hours]
Design of Lever: Classification, Design of levers, Cranked lever, Lever of safety valve, , Power screw ,design with square thread such as screw jack	
Teaching Methods: Chalk& Board/ PPT/Video Lectures	
Text Books:	
1. Design of Machine Elements, V.B. Bhandari, Tata McGraw Hill, 3 rd edition ,2010.	
2. Mechanical Engineering Design, J.E.Shigley, R.G.Budynas and K.J.Nisbett,TMH , 10 th edition, 2014	
Ref. Books:	
1. Machine Design, P.Kanaiah, Scietech Publications, 2 nd edition, 2010	
2. Fundamentals of Machine Component Design by R.C.Juvinall and K.M.Marshek, John Wiley & Sons, 5 th edition, 2012.	
3. Machine Design: An Integrated Approach, Norton, R. L., Pearson, 5 th edition 2014

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
	MANUFACTURING SCIENCE - II	3	0	0	3	A

Pre -Requisite: Engineering workshop, Mechanics

Course Educational Objectives

CEO1	To know the basics of metal machining and mechanics of metal machining
CEO2	To study the different cutting tool materials and types & geometry of cutting tools
CEO3	To acquire knowledge on various machining processes and its working principle
CEO4	To select the best suitable non conventional manufacturing process for processing of various hard, brittle and heat sensitive materials employed in modern manufacturing industries.

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Describe the concepts in tool geometry and develop relations for different physical quantities using appropriate technique during orthogonal cutting.
CO2	Discuss the working principle of conventional machines and the application of production machine tools
CO3	Explain the various mechanisms involved in conventional machines and interpret the concept of economics of metal cutting
CO4	Classify the knowledge of Non-conventional machining processes with its advantages, limitations and application.

CO-PO & PSO Mapping

SCHOOL OF ENGINEERING AND TECHNOLOGY

DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:2	[12 Hours]
Conventional machining process and machine tools – Turning, Drilling, Shaping, Planning, Milling, Grinding. Machine tools used for these processes, their specifications and various techniques used. Production Machine tools – Capstan and turret lathes, single spindle and multi spindle semiautomatics, Gear shaper and Gear hobbing machines	
UNIT:3	[12 Hours]
Principles of machine tools: Kinematics of machine tools, speed transmission from motor to spindle, speed reversal mechanism, mechanism for feed motion, Tool holding and job holding methods in different Machine tools, Indexing mechanism and thread cutting mechanism, Quick return mechanism. Calculation of Machining time for various machining process, Economics of machining.	
UNIT:4	[12 Hours]
Non-traditional Machining processes: Need of non-conventional machining, Comparison of conventional and non-conventional machining, Working principle of Ultrasonic Machining, Laser Beam Machining, Plasma Arc Machining, Electro Chemical Machining, Electro Discharge Machining, Electron Beam Machining, Abrasive Jet Machining, Application, Advantage and limitation of various non conventional machining processes.	
Teaching Methods: Chalk& Board/ PPT/Video Lectures/Lecture by Industry Expert	
Text Books: 1. Fundamentals of Machining and Machine Tools, G.Boothroyd and W.A.Knight, CRC Press 2. Metal Cutting Principles, M.C.Shaw, Oxford University Press 3. A Textbook of Production Engineering, P.C. Sharma, S. Chand & Co	
Ref. Books: 1. Manufacturing Technology – by P.N.Rao, Tata McGraw Hill publication. 2. Modern Manufacturing Processes, P.C.Pandey, H.S.Shan, Tata McGraw Hill 3. Manufacturing Science, Ghosh and Mallik, East West Press.

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
	INTERNAL COMBUSTION ENGINES	3	1	0	4	A

Pre -Requisite: Engineering Thermodynamics

Course Educational Objectives

CEO1	Understand the thermodynamic cycle (Otto, Diesel) and know the working principle of reciprocating internal combustion engine.
CEO2	Understand the concept of atomization of fuel in carburetor and spray formation in injector.
CEO3	Understand the mechanism of ignition, injection, combustion, supercharging, scavenging, knocking and detonation phenomena.
CEO4	Understand the engine performance in terms of power, efficiency, exhaust emission and control.

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Illustrate working and performance of IC Engines through thermodynamic cycles, and various systems of IC engine.
CO2	Classify atomization ,spray formation and combustion phenomena related to SI and CI engines and factors influencing combustion chamber design.
CO3	Analyze exhaust gas emission formation mechanism of IC engines and its effects and the legislation standards.
CO4	Design IC Engine with use of super charger and turbo charger according to alternate fuels.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	
CO1	3	3													3
CO2	3	2													3
CO3	3	3	2												3
CO4	3	2	2												3
Avg.	2.5	2.5	1												3

SYLLABUS

UNIT:1 Fundamentals of I.C.Engines [10 Hours]

Introduction, Classification of I.C. Engines. Fundamental difference between SI and CI engines, Comparison of two stroke and four stroke engines. Valve timing diagram, Properties and rating of IC engine, fuels, Additives and non-petroleum fuels.

Gas power cycles: Air standard cycles- Otto, Diesel, Dual Combustion and Brayton cycles, The Brayton cycle with non-isentropic flow in compressors and turbines, The Brayton cycle with regeneration, reheating and intercooling, Ideal jet propulsion cycle.

Introduction to Alternative Fuels: LPG, LNG, CNG, Alcohol, Hydrogen, Vegetable oils and Biogas.

GIET UNIVERSITY GUNUPUR, ODISHA

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:2	[14 Hours]
Carburetion and Fuel injection: Function of carburetors, Description and principle of simple carburettor and its drawback, petrol injections. Requirements of diesel injections system. Types of injection systems, Fuel pumps and nozzles, types of fuel injections, Spray formation, penetration and direction.	
Combustion of Fuels: Stages of SI engine combustion, Effect of engine variables on ignition lag and flame propagation, fuel knock, control of knock. SI engine combustion chamber stage of diesel combustion, variables affecting delay period. Diesel knock and methods of control. CI engine combustion chambers	
UNIT:3	[10 Hours]
Supercharging and scavenging: Thermodynamic cycle with supercharging and its effect. Efficiency of supercharging engines Methods of supercharging and scavenging of two stroke engines. Turbo charging: Methods of turbo charging, effects of turbo charging on performance	
UNIT:4	[12 Hours]
Testing and Performance: Fuel air and power measurement methods. Performance of SI and CI engines, Characteristic curves, Governing of speed.	
Engine Emission and Control: Engine Emissions and its harmful effects, Gasoline and Diesel emission: Methods of measuring pollutants controlling of engine emission.	
Cooling Lubrication and ignition systems: Air cooling and water cooling systems effects of cooling on power output and efficiency. Properties of lubricants additives lubricating systems. Battery, Magnet ignition systems ignition timing.	
Teaching Methods: Chalk& Board/ PPT/Video Lectures/Lecture by Industry Expert	
Text Books:	
2. IC Engines, V Ganeshan, TMH, 4th edition	
3. IC Engines, H N Gupta, PHI Publication, 3 rd edition.	
Ref. Books:	
1. IC Engines, Mathur and Sharma, Dhanpat Rai & Sons, 4 th edition.	
2. IC Engines, Gill and Smith, OXFORD & IBH, 4 th edition.	
3. IC Engines Fundamentals, John B. Heywood, TMH, 3 rd edition.

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
	ADVANCED MECHANICS OF SOLID	3	0	0	3	A

Pre -Requisite: Fundamentals in mathematics, Engg. Mechanics and Material science

Course Educational Objectives

CEO1	Explain the students of different types of mechanical elements, structural bodies and their application
CEO2	By Appling different types of theories of failure, strength of the machine elements, structural bodies can be determined
CEO3	Summarize the social need of the particular elements and their cost effective design satisfying for the need of society.
CEO4	Make use of the concept of stress and strain in different types of beam, structure analysis, and design in machine elements.

Course Outcomes: *Upon successful completion of this course, students should be able to:*

CO1	Develop principles of elasticity theory to determine stresses and strains
CO2	Apply theory of elasticity and formulate plane stress and plane strain problems
CO3	Estimate stresses and deflection of beams under unsymmetrical bending and to locate shear Centre of thin wall beams.
CO4	Analyze solid mechanics problem using classical methods and energy methods.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	2											1	
CO2	2	3												
CO3	1	3												1
CO4	2	3												
Avg.	2	2.75											0.25	0.25

SYLLABUS

UNIT:1	[14 Hours]
Analysis of stress:- Introduction to stress analysis in elastic solids - stress at a point – stress tensor – stress components in rectangular coordinate system - Cauchy’s equations – stress transformation – principal stresses and planes –stress invariants - hydrostatic and deviatoric stress components, octahedral shear stress –differential equations of equilibrium, plane stress, Mohr’s circle for 3D state of stress.	
Analysis of strain:- Engineering strain - strain tensor (basics only) – analogy between stress and strain tensors - strain-displacement relations (small-strain only) – stress compatibility equation, Airy’s stress function and Bi-harmonic equation	

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

Gunupur - 765022, Dist.- Rayagada, Odisha, INDIA www.giet.edu

SCHOOL OF ENGINEERING AND TECHNOLOGY

DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:2	[12 Hours]
Axisymmetric problems – governing equations – application to thick cylinders, compound cylinder, shrink fit, Bending of Curved Beam, stress distribution in beam with rectangular, circular & trapezoidal section. Stresses in crane hook, ring and chain link Unsymmetrical bending of straight beams, Deflection of unsymmetrical bending.	
UNIT:3	[12 Hours]
Strain energy of deformation – special cases of a body subjected to concentrated loads, moment or torque - reciprocal relation – strain energy of a bar subjected to axial force, shear force, bending moment and torque. Maxwell reciprocal theorem – Castigliano’s first and second theorems – virtual work principle – minimum potential energy theorem.	
UNIT:4	[10 Hours]
Torsion of non-circular bars: Saint Venant’s theory - solutions for circular and elliptical cross-sections Prandtl’s method - solutions for circular and elliptical cross-sections - membrane analogy. Torsion of thin walled tubes, thin rectangular sections, rolled sections and multiply connected sections Variable stresses – reversed cyclic stress, fluctuating stress, alternating stress, stress concentration, stress concentration factor, notch sensitivity	
Teaching Methods: Chalk& Board	
Text Books: 1. Advanced Mechanics of Solids, L.S. Srinath, Tata McGraw Hill 2. Advanced Mechanics of Materials : Boresi and Schmidt, Willey	
Ref. Books: 1. Advanced Mechanics of Materials : Siley and Smith 2. Strength of Materials Vol.II, by S.Timoshenko 3. Mechanical Metallurgy by Dieter

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	AUTOMOBILE ENGINEERING	3	0	0	3	A								
Pre -Requisite: Internal Combustion Engine, Kinematics and Dynamics of Machines														
Course Educational Objectives														
CEO1	To impart practical and theoretical knowledge in both practically by covering the various types of power-driven vehicles													
CEO2	To familiarize the students with the fundamentals of Automotive Engine System, Chassis and suspension system, braking and transmission system, and cooling system													
CEO3	To make the students acquainted with the operation, maintenance and repairs of all components of the various transportation vehicles													
CEO4	To make the students aware of the various electrical vehicles and electrical system of automobiles													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	List out the different components and systems of an automobile.													
CO2	Illustrate the constructional designs and working principles involved in vehicle design.													
CO3	Utilize steering geometry, principle of gear box design and braking system for effective power transmission of vehicles													
CO4	Develop electrical vehicles considering environmental safety													
CO-PO & PSO Mapping

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

drum, different arrangement of brake shoes, servo and power brakes.

UNIT:2 [12 Hours]

Transmission Systems: Layout of the transmission system, main function of the different components of the transmission system, transmission system for two wheels and four wheels drives. Hotchkiss and torque tube drives.

Gear box :

Sliding mesh, constant mesh and synchromesh gearbox, design of 3 speed and 4 speed gear box, over drive, torque converter, semi and fully automatic transmission. Hooke's joint, propeller shaft, differential, rear axles, types of rear axles, semi floating, three quarter floating and full floating types.

UNIT:3 [10 Hours]

Front wheel Geometry and steering systems : Camber, castor, kingpin inclination, toe-in and toe-out, centre point steering condition for true rolling, components of steering mechanism, power steering (Hydraulic & Pneumatic).

Ignition System: Requirements of an ignition system, conventional ignition system (Battery and Magneto), Modern ignition system (TCI, CDI), Spark advance mechanism.

UNIT:4 [10 Hours]

Electrical system of an automobile : Starting system, charging system, other electrical system. Electrical vehicles: History, electrical vehicles and the environment pollution, description of electric vehicle, Operational advantages, present EV performance and applications, battery for EV, Battery types and fuel cells, Solar powered vehicles, hybrid vehicles.

Teaching Methods: Chalk& Board/ PPT/Video Lectures/Models

Text Books:

1. Automobile Mechanics , N.K.Giri, Khanna publishers,3rd edition
2. Automobile Engineering, K.M. Gupta, VolI & II, Umesh Publication,4th edition

	MODERN MANUFACTURING PROCESSES	3	0	0	3	A

Pre -Requisite: Basic Manufacturing process, Machining science and technology

Course Educational Objectives

CEO1	To learn the concepts of material removal using various advanced machining operations
CEO2	To develop competency in understanding of machine tools and mechanism involved in machining operations
CEO3	To apply fundamentals principles of electro chemical, laser and plasma machining
CEO4	To be able to control surface finish, material removal rate and accurate dimensions by applying different machining operations

Course Outcomes: *Upon successful completion of this course, students should be able to:*

CO1	Understand requirements to achieve maximum material removal rate and best quality of machined surface while machining various industrial engineering materials.
CO2	Analyze the machining process parameters, and mechanism involved in material removal process in various non conventional machining.
CO3	Interpret contemporary issues in material removal process using advanced techniques, skills and modern engineering tools necessary for engineering practice.
CO4	Apply the concept of concurrent, reversed engineering and rapid prototyping in various industrial applications.

SCHOOL OF ENGINEERING AND TECHNOLOGY

DEPARTMENT OF MECHANICAL ENGINEERING

Gas, Type of abrasive work material, standoff distance (SOD), nozzle design, shape of cut. Process characteristics-Material removal rate, Nozzle wear, Accuracy & surface finish. Modelling for finding MRR. Applications, advantages & Disadvantages of AJM. Numerical on MRR.

Water Jet Machining: Principle, Equipment, Operation, Application, Advantages and limitations of Water Jet machining.

UNIT:2 [12 Hours]

ELECTROCHEMICAL MACHINING (ECM): Introduction, study of ECM machine, elements of ECM process: ECM Process characteristics – Material removal rate, Accuracy, surface finish, Applications, Electrochemical turning, Grinding, Honing, deburring, Advantages, Limitations. Numerical on MRR

CHEMICAL MACHINING (CHM): Introduction, elements of process, chemical blanking process, process characteristics of CHM: material removal rate, accuracy, surface finish, Hydrogen embrittlement, advantages & application of CHM.

ELECTRICAL DISCHARGE MACHINING (EDM): Introduction, mechanism of metal removal, dielectric fluid, spark generator, EDM tools (electrodes) Electrode feed control, EDM process characteristics: metal removal rate, accuracy, surface finish, Heat Affected Zone. Machine tool selection, Application, electrical discharge grinding, wire EDM

UNIT:3 [12 Hours]

PLASMA ARC MACHINING (PAM): Introduction, equipment, non-thermal generation of plasma, selection of gas, Mechanism of metal removal, PAM parameters, process characteristics. Applications, Advantages and limitations.

LASER BEAM MACHINING (LBM): Introduction, equipment of LBM mechanism of metal removal, LBM parameters, Process characteristics, Applications, Advantages & limitations.

ELECTRON BEAM MACHINING (EBM): Principles, equipment, operations, applications, advantages and limitation of EBM

UNIT:4 [10 Hours]

Introduction to Surface engineering, High speed machining and grinding: Application of advanced coatings in high performance modern cutting tools and high performance super-abrasive grinding wheels, Micro and nano machining of glasses and ceramics. Theory and application of chemical processing: Chemical Machining, Coating and Electro-less forming, PVD and CVD; Introduction to Reverse Engineering, Concurrent Engineering and Rapid prototyping: Solid based, liquid and powder based rapid prototyping methods.

Teaching Methods: Chalk& Board/ PPT/ Lecture by Industry Expert

Pre -Requisite: Theory of Machines

Course Educational Objectives

CEO1	Understand the principles of dynamics applied in Theory of machinery
CEO2	To verify the gyroscopic principle under dynamic loadings.
CEO3	To conduct experimentation to find the damping co-efficient for natural and forced frequencies.
CEO4	To analyze the static and dynamic balancing of different components.

Course Outcomes: Upon successful completion of this course, students should be

CO1	Define the gyroscopic effects in ships, aero planes and road vehicles
CO2	Analyze and design centrifugal governors.
CO3	Analyze balancing forces in rotating and reciprocating machine components.
CO4	Determine co-efficient of damping for free and forced vibrations of single degree freedom systems.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	1			2						1				
CO2	1	2		2						2				
CO3	1			3						2				
CO4	1			3						2				
Avg	1	0.5		2.5						1.75				

LIST OF EXPERIMENTS

List of Experiment: (Minimum 8 Experiments)

1. Design of any one working model related to Mechanisms and Machines i.e., Module I and II.
2. Design of any one working model related to Mechanisms and Machines i.e., Module III and IV.
3. Determination of gyroscopic couple using gyroscopic test rig.
4. Performance characteristics of a spring loaded governor
5. Determination of critical speed of rotating shaft
6. Experiment on static and dynamic balancing apparatus
7. Determination of natural frequencies of un-damped as well as damped vibrating systems.
8. Study of interference and undercutting for gear drives
9. Experiment on Cam Analysis Apparatus.
10. Experiment on evaluation of damping in a vibrating system

GIET UNIVERSITY GUNUPUR, ODISHA

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT	COURSE TITLE	L	T	P	C	QP
	MANUFACTURING SCIENCE -II LABORATORY	0	0	2	1	

Pre -Requisite: Engineering Workshop, Mathematics

Course Educational Objectives

CEO1	To provide the student with personal, hands-on experience in the operation of standard machine tools
CEO2	To provide to the students an understanding and appreciation of the abrasive metal cutting processes.
CEO3	To provide a proper insight about the importance of lubrication and wear problems.
CEO4	To provide the students with a proper understanding of nontraditional machining processes.

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Classify the basic principle and techniques of lathe, shaper and planner, drilling, milling and grinding machines.
CO2	Evaluate different cutting force acts during machining by lathe tool dynamometer
CO3	Define the concept and applications of modern machining processes.
CO4	Develop the design of job with proper dimension using CNC Lathe and milling.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs

CO3	1			2						2				
CO4	1			3						2				
Avg	1			2.25						1.75				

LIST OF EXPERIMENTS

LIST OF EXPERIMENTS: (Minimum 7 experiments)

1. Job on lathe with taper turning, thread cutting, knurling and groove cutting
2. Gear cutting (with index head) on milling machine
3. Working with shaper, Planner and slotting machine.
4. Working with surface and cylindrical grinding.
5. Determination of cutting force using Lathe tool dynamometer.
6. Determination of cutting force in drilling using drill tool dynamometer.
7. Study of Non-traditional machining processes.(USM, AJM, EDM, ECM)
8. Study of CNC Lathe and demonstration of making job in CNC lathe.
9. Study of CNC Milling machine and demonstration of making job in CNC Milling machine.

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

COURSE CODE	COURSE TITLE	L	T	P	C	QP
	INTERNAL COMBUSTION ENGINES LABORATORY	0	0	2	1	

Pre -Requisite: Basic Knowledge of Thermodynamic cycle and Mathematics

Course Educational Objectives

CEO1	Understand thermodynamic cycle, valve timing diagram, function of different components and its working principle.
CEO2	Understand the mechanism of carburetion, injection and know the working principle of carburetor, injector, fuel pump, air filter.
CEO3	Understand different types of cooling system, lubrication, analysis of exhaust gas emission.
CEO4	Understand load test analysis, performance analysis of single cylinder/ multi cylinder SI and CI engine.

Course Outcomes: Upon successful completion of this course, students should be

CO1	Classify the concept of valve timing diagram of both SI and CI engine.
CO2	Develop the concept of carburetion, atomization, spray formation and injection technique.
CO3	Compare lubrication and cooling phenomena related to SI and CI engines and factor influencing them.
CO4	Measure load test analysis and prepare heat balance sheet on four stroke multi cylinder SI and CI engine.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs

CO3	1			2										2
CO4	1			2										2
Avg	1.25			2.25										2

LIST OF EXPERIMENTS

List of Experiment: (Minimum 8 Experiments)

1. Valve timing diagram of an IC engine
2. Study of a modern carburetor (e.g. Solex Carburtor)
3. Study of fuel injection system of a diesel engine
4. Analysis of exhaust gas of automobile (Orsat apparatus)
5. Study of different cooling systems in automobiles (Air cooling and water cooling).
6. Study of lubrication systems in automobiles.
7. Load test on 4-stroke single cylinder C.I. engine.
8. Load test on 4-stroke single cylinder S.I. engine.
9. Morse Test on multi-cylinder S.I. or C.I. engine
10. Load test on variable compression ratio S.I. engine
11. Load test and Heat balance on 2 stroke S.I. Engine

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	HEAT TRANSFER	3	1	0	3	A								
Pre -Requisite: Basics of thermodynamics, fluid mechanics														
Course Educational Objectives														
CEO1	To understand the basic concept of mode of heat transfer.													
CEO2	To analyze the 1D and 2D heat conduction in form transient and with heat generation mode.													
CEO3	To study the thermal boundary layer, during convective heat transfer over a pipe or flat surface.													
CEO4	To Understand the effect of radiative heat transfer.													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Recall the thermodynamics correlations and understand the fundamental modes of heat transfer like conduction, convection and radiation.													
CO2	Evaluate the temperature distribution in steady state and unsteady state heat conduction.													
CO3	Interpret and analyze convective heat transfer by using empirical correlations of external and internal, forced and free convection.													
CO4	Design the heat exchanger with using LMTD and NTU methods.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	2												2
CO2	3	3												2
CO3	3	3												2
CO4	2	3	2											3
Avg.	2.75	2.75	0.5											2.25
SYLLABUS														
UNIT:1							[15 Hours]							
Introduction to heat transfer:														
Modes of heat transfer: conduction, convection, and radiation ,Mechanism & basic laws governing conduction, convection, and radiation heat transfer; Thermal conductivity, Thermal conductance &Thermal resistance, Contact resistance, convective heat transfer coefficient, radiation heat transfer coefficient , Electrical analogy, combined modes of heat transfer.														
Heat conduction:														
The General heat conduction in Cartesian, polar-cylindrical and polar-spherical co-ordinates, Simplification of the general equation for one and two dimensional steady/transient conduction with constant/ variable thermal conductivity with / without heat generation.														
Solution of the one dimensional steady state heat conduction problem in case of plane														

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

Accredited by NAAC with a CGPA of 3.28/4 at A+ Grade

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

walls, cylinders and spheres for simple and composite cases. Critical insulation thickness, Heat transfer in extended surfaces (pin fins) without heat generation, Long fin, short fin with insulated tip and without insulated tip and fin connected between two heat sources. Fin efficiency and fin effectiveness.

Conduction in solids with negligible internal temperature gradient (Lumped heat analysis)

UNIT:2

[15 Hours]

Convective heat transfer: Introduction to convective flow - forced and free, Physical significance of Grashoff, Reynolds, Prandtl, Nusselt and Stanton numbers.

Conservation equations for mass, momentum and energy for 2-dimensional convective heat transfer in case of incompressible flow, Hydrodynamic and thermal boundary layers for flow over a flat plate. Critical Reynolds number; general expressions for drag coefficient and drag force Reynolds-Colbourn analogy. Thermal boundary layer; general expression for local heat transfer coefficient; Average heat transfer Coefficient; Nusselt number. Use of empirical relations for solving turbulent conditions for external and internal flow. Mechanism of heat transfer during natural convection, Experimental heat transfer correlations for natural convection in the following cases (a) Vertical and horizontal plates

(b) Inside and outside flows in case of tubes

UNIT:3

[10 Hours]

Radiative heat exchange: Introduction, Radiation properties, definitions of various terms used in radiation heat transfer; Absorptivity, reflectivity & transmissivity. Emissive power & emissivity, Kirchhoff's identity, Planck's relation for monochromatic emissive power of a black body, Derivation of Stefan-Boltzmann law and Wien's displacement law from Planck's relation, Radiation shape factor, Relation for shape factor and shape factor algebra. Heat exchange between black bodies through non-absorbing medium. Gray bodies and real bodies, Heat exchange between gray bodies. Radiosity and Irradiation, Radiation shields.

UNIT:4

[8 Hours]

Heat Exchangers: Introduction, Types of heat exchanger, the overall heat transfer coefficient and fouling factors, LMTD and E-NTU analysis of heat exchangers.

Heat transfer for boiling liquids and condensing vapours: Types of condensation, use of correlations for condensation on vertical flat surfaces, horizontal tube and; regimes of pool boiling, pool boiling correlations. Critical heat flux, concept of forced boiling. Numericals.

Teaching Methods: Chalk & Board

Text Books

1. Heat Transfer : R.K.Rajput, Laxmi Publications, 3RD EDITION.
2. Fundamentals of Engineering Heat and Mass Transfer: R.C.Sachdeva, New Age International, 2ND Edition.
3. Heat and Mass Transfer by Yonus A Cengel, TMH, 6TH Edition.

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	MACHINE DESIGN -II	3	0	0	3	A								
Pre Requisite: Fundamentals in mathematics, Engg. Mechanics, TOM, MOS and Drawing.														
Course Educational Objectives														
CEO1	This course is intended to introduce the mechanical engineering students to the basic components of machinery, and how to select and size these components to achieve design goals in the construction of mechanical system													
CEO2	To familiarize the various steps involved in the Design Process and to understand the principles involved in evaluating the shape and dimensions of a component													
CEO3	To satisfy functional and strength requirements and learn to use standard practices and standard data of machine components.													
CEO4	To develop an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice and obtaining design solutions to open ended problems through a systematic design process													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Classify the types of Bearing, application and material of bearing.													
CO2	Design the pressure vessels and belt drive.													
CO3	Analyze the design of spring and gears.													
CO4	Design of Flywheel and I.C engine Components.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs

	PRODUCTION AND OPERATION MANAGEMENT	3	0	0	3	A

Pre -Requisite:

Course Educational Objectives

CEO1	To educate basics of various Productions, operation and management system in various industry.
CEO2	To develop an idea of safe work system design and selection of appropriate method for a process.
CEO3	To build up an entrepreneurial skill through the topics like layout design, forecasting and inventory control.
CEO4	To impart current advanced trends of different industries.

Course Outcomes: *Upon successful completion of this course, students should be able to:*

CO1	Outline the concept of operation function, product design and process technology and correlate the factors affecting productivity of industries.
CO2	Apply different techniques for better work system design and to understand the concept of location and various forecasting technique.
CO3	To understand the concept of inventory control and analyze the data collected from different sections of organization for planning and control.
CO4	Illustrate the concept of Sequencing and Scheduling, Project Management and modern trends in manufacturing.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs

Time Estimation.
UNIT:2 [11 Hours] Location and Layout: Factor Influencing Plant, Facility Location Procedure and Models: Qualitative Models, Breakeven Analysis, location Model, centroid method. Layout Types: Process Layout, Product Layout, Fixed Position Layout; Concept of GT. Forecasting: Principles and Method, Moving Average, weighted Moving Average, Exponential Smoothing, Linear regression, Delphi method, Forecasting Error.
UNIT:3 [10Hours] Inventory Control: Relevant Costs, Basic EOQ Model, Model with Quantity discount, Economic Batch Quantity, Periodic and Continuous Review Systems, Safety Stock, Reorder Point and Order Quantity Calculations. ABC Analysis. Manufacturing Planning and Control: The Framework and Components: Aggregate Planning, Master Production Scheduling, Rough-cut-Capacity Planning, Material Requirements Planning, Capacity Requirements Planning.
UNIT:4 [14 Hours] Sequencing and Scheduling: Single Machine Sequencing: Basics and Performance Evaluation Criteria, Methods for Minimizing Mean Flow Time, Flowshop sequencing: 2 and 3 machines cases: Johnson's Rule, CDS heuristic and Jobshop Scheduling: Priority dispatching Rules. Project Management: Introduction, phases, guidelines for network construction; Critical Path Method (CPM), project evaluation and review technique (PERT), Crashing of project network. Modern Trends in Manufacturing: Just in Time (JIT) System, FMS, Total Quality Management, Total Productive Maintenance, Lean Manufacturing, Supply Chain Management, and ERP.
Teaching Methods: Chalk& Board/ PPT/Video Lectures/Lecture by Industry Expert

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
	REFRIGERATION AND AIR CONDITIONING	3	0	0	3	A

Pre -Requisite: Basic of thermodynamics, Heat transfer

Course Educational Objectives

CEO1	Explain how thermodynamic principles are applied within the refrigeration and Air conditioning, methods of lowering the temperature in single compression system.
CEO2	Summarize about various system components and accessories of air-craft refrigeration system, VCRS, VARS and different air-conditioning system.
CEO3	Apply knowledge of principles of producing low temperatures by using multi compressor, multi-evaporator systems and cascade systems.
CEO4	Illustrate the different types and classification of refrigerant with its properties, To carry-out cooling load calculations for different applications.

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Recall the basic principle of thermodynamics and understand various refrigeration systems like air refrigeration, vapor compression and absorption refrigeration etc.
CO2	Evaluate and explain various terminologies involved in psychometric process.
CO3	Estimate cooling load calculations for various air-conditioning systems.
CO4	Design human comfort air conditioning systems related to cooling load estimations.

CO-PO & PSO Mapping

DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:2	[10 Hours]
Multi-stage compression and Multi-evaporator systems: Different arrangements of compressors and inter-cooling, Multistage compression with inter-cooling, Multi-evaporator system, Dual compression system. Simple problems	
UNIT:3	[10 Hours]
Vapour Absorption System: Simple Ammonia - absorption system, Improved absorption system, Electrolux/Three fluid system, Lithium-bromide-water vapour absorption system, comparison of absorption system with vapour compression system. Simple Problems and solution. Thermoelectric Refrigeration, Magnetic Refrigeration. Refrigerants: Classification of refrigerants and its designation- Halocarbon (compounds, Hydrocarbons, Inorganic compounds, Azeotropes, Properties of refrigerants, comparison of common refrigerants, uses of important refrigerants, Brines. Alternative refrigerants (Organic and inorganic compounds).	
UNIT:4	[13 Hours]
Psychrometrics: Properties of air-vapour mixture, Law of water vapour-air mixture, Enthalpy of moisture, Psychrometric chart, simple heating and cooling, Humidification, De-humidification, Mixture of air streams. Review question and discussions. Requirements of comfort air conditioning: Oxygen supply, Heat removal, moisture removal, air motion, purity of air, Thermodynamics of human body, comfort and comfort chart.	
Teaching Methods: Chalk& Board/ PPT/Video Lectures

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
	FATIGUE, CREEP & FRACTURE	3	0	0	3	A

Pre -Requisite:

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Be familiar with the fatigue development and Influence of stress concentration under fatigue strength.
CO2	Understand and able to analyze Mechanism of creep and it effects in design components.
CO3	Interface various modes of fracture under different Theories.
CO4	Ability to conduct an experimental analysis on different materials subjected to creep, fatigue and fracture mechanisms.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	3												
CO2	3	3												
CO3	2	2												
CO4	2	2												
Avg.	2.5	2.5												

SYLLABUS

UNIT:1	(12 Hours)
Fatigue: Types of fatigue loading and failure, Fatigue test, endurance limit; Fatigue under combine stresses; Influence of stress concentration on fatigue strength, Notch sensitivity, Factors influencing fatigue behaviour.	
UNIT:2	(10 Hours)
Phase in fatigue life – Crack initiation – Crack growth – Final fracture – Dislocations – Fatigue fracture surfaces.	
UNIT:3	(12 Hours)
Creep: Creep-stress-time temperature relations, Mechanics of creep in tension, bending, torsion, creep buckling. Members subjected to creep and combined stresses.	
UNIT:4	(12 Hours)
Fracture: Basic modes of fracture, Griffith of brittle fracture, Irwin’s theory of fracture inelastic-plastic materials. Theories of linear elastic fracture mechanics, stress intensity factors, fracture toughness testing.

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
	COMPUTATIONAL FLUID DYNAMICS	3	0	0	3	A

Pre -Requisite: Fluid Mechanics, Heat transfer, Finite element methods

Course Educational Objectives

CEO1	To introduce the basics of CFD through FVM, FDM and FEM to students
CEO2	To teach different discretization scheme to formulate the governing equations.
CEO3	To make the students understand about fluid flow problem through numerical method (staggering and discretization method).
CEO4	To make the students familiar with transient heat transfer problems through finite volume method

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Develop mathematical models for solving fluid flow problems, through one dimensional geometry.
CO2	Analyze the behavior of fluid flow through discretization using, finite volume method.
CO3	Illustrate and Solve the unsteady heat conduction examples using finite volume method.
CO4	Evaluate the transient convection –diffusion problems using different discretization scheme.

CO-PO & PSO Mapping

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	ADDITIVE MANUFACTURING	3	0	0	3	A								
Pre -Requisite: Basic of Manufacturing processes														
Course Educational Objectives														
CEO1	To teach how to make objects from 3D model data, usually layer upon layer, as opposed to subtractive manufacturing methodologies, such as traditional machining													
CEO2	To make the students learn the manufacturing of highly complex parts can be an economically viable alternative to conventional manufacturing technologies													
CEO3	To teach type of material used, the deposition technique or by the way the material is fused or solidified													
CEO4	To expose the students to the mathematical models for AM to describe the transport phenomena such as heat/mass transfer and fluid flow													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Explain the importance of AM in Manufacturing													
CO2	Able to compare different method and discuss the effects of the Additive Manufacturing technologies													
CO3	Analyze the characteristics of the different materials in Additive Manufacturing for social applications													
CO4	Elaborate to design a component with Additive Manufacturing technique in the application of Automobile, Aerospace, and Bio-medical etc as well optimize material utilization and elevate the performance.													
CO-PO & PSO Mapping

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	VIBRATION AND STRUCTURAL DYNAMICS	3	0	0	3	A								
Pre -Requisite: DOF, SHM, Laplace Transformation														
Course Educational Objectives														
CEO1	To teach the importance of vibrations in mechanical design of machine parts that operates in vibratory conditions.													
CEO2	To teach linear vibratory models of dynamic systems with changing complexities (S-DOF and M-DOF).													
CEO3	To derive the differential equation of motion of vibratory systems.													
CEO4	To train the students to analyze on free and forced (harmonic, periodic, non-periodic) vibration system of single and multi degree of freedom linear systems.													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Identify the causes and effects of vibration in mechanical systems.													
CO2	Develop schematic models for physical systems and formulate governing equations of motion.													
CO3	Explain the role of damping, stiffness and inertia in mechanical systems													
CO4	Analyze rotating and reciprocating systems and compute critical speeds.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs

SCHOOL OF ENGINEERING AND TECHNOLOGY

DEPARTMENT OF MECHANICAL ENGINEERING

Hydraulic Cylinder Loading, mounting arrangements, cushioning, special types of cylinders, problems on cylinders, construction and working of rotary actuators such as gear, vane, piston motors, Hydraulic Motor Theoretical Torque, Power and Flow Rate, Hydraulic Motor Performance, problems, symbolic representation of hydraulic actuators (cylinders and motors).

Unit-2: Control Components in Hydraulic Systems (12 hours)

Classification of control valves, Directional Control Valves- Symbolic representation, constructional features of poppet, sliding spool, rotary type valves solenoid and pilot operated DCV, shuttle valve, check valves, Pressure control valves - types, direct operated types and pilot operated types.

Flow Control Valves -compensated and non-compensated FCV, needle valve, temperature compensated, pressure compensated, pressure and temperature compensated FCV, symbolic representation. Maintenance of Hydraulic System Hydraulic Oils - Desirable properties, general type of Fluids, Sealing Devices, Reservoir System, Filters and Strainers, wear of Moving Parts due to solid -particle Contamination, temperature control (heat exchangers), Pressure switches, trouble shooting.

Unit-3: Introduction to Pneumatic Control Pneumatic Actuators: (10 hours)

Introduction to Pneumatic Control: Definition of pneumatic system, advantages, limitations, applications, Choice of working medium. Characteristic of compressed air. Structure of Pneumatic control System, fluid conditioners and FRL unit. Pneumatic Actuators: Linear cylinder - Types, Conventional type of cylinder- working, End position cushioning, seals, mounting arrangements- Applications. Rod - Less cylinders types, working, advantages, Rotary cylinders- types construction and application, symbols.

Pneumatic Control Valves: DCV such as poppet, spool, suspended seat type slide valve, pressure control valves, flow control valves, types and construction, use of memory valve, Quick exhaust valve, time delay valve, shuttle valve, twin pressure valve, symbols. Simple Pneumatic Control direct and indirect actuation pneumatic cylinders, speed control of cylinders - supply air throttling and Exhaust air throttling and Exhaust air throttling. Signal Processing Elements: Use of Logic gates - OR and AND gates in pneumatic applications. Practical Examples involving the use of logic gates, Pressure dependant controls- types - construction - practical applications.

Unit-4 (10 hours)

Multi- Cylinder Application: Coordinated and sequential motion control, Motion and control diagrams. Signal elimination methods, Cascading method- principle, Practical application examples (up to two cylinders) using cascading method (using reversing valves). Electro- Pneumatic Control: Principles - signal input and output, pilot assisted solenoid control of directional control valves, Use of relay and contactors. Control circuitry for simple signal cylinder application. Compressed Air: Production of compressed air- Compressors Preparation of compressed air-Driers, Filters, Regulators, Lubricators, Distribution of compressed air Piping layout.

VII Semester [Fourth Year]

Sl. No.	Category	Course Code	Course Title	Hours per week			Credits
				L	T	P	
1	Professional Elective Courses		Finite Element Method	3	0	0	3
			Gas Dynamics and Jet Propulsion				
			Advanced Welding Technology				
			Tribology				
2	Professional Elective Courses		Design and Analysis of Heat Exchanger	3	0	0	3
			Fire and Safety Engineering				
			Non-Destructive Evaluation and Testing				
			Nano Science				
3	Open Elective Courses		Industrial Robotics	3	0	0	3
			Green Technology				
			Intellectual Property Rights				
			Industrial Automation & Control				
4	Humanities and Social Sciences including Management Courses		Marketing Management	2	0	0	2
			Engineering Economics and Costing				
			Entrepreneurship Development				
			Human Resource Management				
5	Project		Summer Industry Internship	-	-	2	1
6	Project		Project Work-I	0	0	8	4
Total Credits:				11	0	10	16

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	Q P G								
	FINITE ELEMENT METHODS	3	0	0	3	G								
Pre -Requisite: Basic Mathematics, Mechanics of solid														
Course Educational Objectives														
CEO1	To teach the basic principles, design and modeling considerations in using finite element Method.													
CEO2	Make the students to develop stiffness matrices for spring, truss, beam, plane stress problems and three dimensional problems.													
CEO3	To teach the finite element method to solve structural, fluid flow and thermal problem.													
CEO4	To teach the basics of FEM to solve various engineering problems.													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Explain the application and characteristics of FEM for the elements such as bars, beams, plane, isoperimetric elements, and 3-D element.													
CO2	Apply the concepts behind variational methods and weighted residual methods in FEM													
CO3	Analyze the element characteristic equation procedure and generation of global stiffness equation will be applied.													
CO4	Select the finite element method to solve problems involving axisymmetric solids subjected to axisymmetric loadings, fluid flow and heat conduction.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	2	2												
CO2	2	2												
CO3	3	2												
CO4	2	2												
Avg.	2.25	2												
SYLLABUS														
UNIT:1						[06 Hours]								
FEM fundamental concepts, Difference between classical method and FEM and FDM, Application of FEM, Advantages and limitation of FEM, Commercial softwares used for FEM. Preprocessing, processing and post processing.														
UNIT:2						[08 Hours]								
Variational principles, Rayleigh Ritz and Galerkin Methods, Elimination and penalty approaches, Finite Element Modeling of one dimensional problems. Finite Element Analysis of 2-D framed structures.														

GIET UNIVERSITY GUNUPUR, ODISHA

Gunupur - 765022, Dist.- Rayagada, Odisha, INDIA www.giet.edu

SCHOOL OF ENGINEERING AND TECHNOLOGY

DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:3	[13 Hours]
FEM formulation of 2-D and 3-D stress analysis problems. Jacobian matrix, Axisymmetric solids subjected to axisymmetric loadings. Two-dimensional isoparametric elements	
UNIT:4	[10 Hours]
Finite element modeling of fluid flow and heat conduction problems. Exposure to commercial FE codes in ANSYS	
Teaching Methods: Chalk & Board	
Text Books:	
1. Finite Elements in Engineering, T.R.Chandraputla and A.D.Belegundu, PHI.	
2. A First Course in the Finite Element Method, D.L.Logan, Cengage Learning	
Ref. Books:	
1. Introduction to Finite Element Method, J.N.Reddy, Tata McGraw Hill.	
2. The Finite Element Method in Engineering, S.S.Rao, Elsevier	
3. Fundamentals of Finite Element Analysis, David V. Hutton, Tata McGraw Hill.

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
	GAS DYNAMICS AND JET PROPULSION	3	0	0	3	A

Pre -Requisite: Thermodynamics ,fluid mechanics and Mathematics

Course Educational Objectives

CEO1	To teach gas turbine cycle (Brayton) and know the working principle of each component of gas turbine engine
CEO2	To make the students about the application of shaft power in gas dynamics , compressibility effects, normal shock wave and oblique shock wave
CEO3	To teach about the design of combustion chamber and performance characteristics curve
CEO4	To aware the students about the application of axial flow turbine ,turbojet, turbo prop, turbo fan, ram jet, pulse jet engine

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Understand the concept of Brayton cycle, compressors, one and three dimensional flow, combustion theory, turbo machines etc.
CO2	Solve problems on Brayton cycle, one /three dimensional flow, gas dynamics, combustion chamber, centrifugal and axial compressors/turbines.
CO3	Design and evaluate the performance of turbine blades, combustion chamber, turbine stages
CO4	Develop turbo machineries with high performance.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	
CO1	3	2													2
CO2	3	3													2
CO3	3	2	3												2
CO4	3	2	3												2
Avg.	3	2.25	1.5												2

SYLLABUS

UNIT:1 [10 Hours]
 Bray ton cycle, regeneration and reheating cycle analysis , Axial flow fans and compressors, Elementary theory, degree of reaction , three dimensional flow, simple design methods, blade design, calculation of stage performance, overall performance.

UNIT:2
 [12 Hours]
 Introduction of gas dynamics – Compressibility effect, steady state one dimensional compressible flow of a perfect gas in a duct, isentropic flow in a constant area duct with friction, normal shock waves, oblique shock wave, supersonic expansion and compression.

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	Q P
	ADVANCED WELDING TECHNOLOGY	3	0	0	3	A

Pre -Requisite: Basics of manufacturing process and materials.

Course Educational Objectives

CEO1	To impart knowledge regarding various advanced welding practices in industries
CEO2	To understand the various parameters and requirements for welding processes
CEO3	To apply the right kind of welding technique suitable for different materials
CEO4	To evaluate the characteristics and properties of various metals and the related chemical, physical and mechanical properties

Course Outcomes: *Upon successful completion of this course, students should be able to:*

CO1	Relate the theoretical aspects of welding technology in depth.
CO2	Describe the basic metallurgy of the melted and heat-affected zone of a metal or alloy.
CO3	Select the suitable welding power sources and determine the mechanism of metal transfer in welding
CO4	Evaluate the basic principle of advanced welding techniques and the appropriate welding process for a particular application

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	1												
CO2	2	2											3	
CO3	2	2												2
CO4	2	2												3
Avg.	2.25	1.75											0.75	1.25

SYLLABUS

UNIT:1	[13 Hours]
<p>WELDING ARC: Definition of Arc, Structure and characteristics, Arc efficiency, arc blow, Electrical Characteristics of arc, Types of Welding Arcs, mechanism of arc initiation and maintenance, role of electrode polarity on arc behavior and arc stability, analysis of the arc. Arc length regulation in mechanized welding processes.</p> <p>WELDING METALLURGY: Introduction, Weld Metal Zone, Theory of solidification of metals and alloys, Homogeneous Nucleation, Heterogeneous Nucleation, Freezing of alloys, Epitaxial Solidification; Effect of Welding speed on Grain structure, Fusion boundary zone, Heat affected zone, Under bead zone, Grain Refined Zone, Partial transformed zone, Properties of HAZ.</p>	

GIET UNIVERSITY GUNUPUR, ODISHA

SCHOOL OF ENGINEERING AND TECHNOLOGY

DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:2	[10 Hours]
WELDING POWER SOURCES: Requirement of an Arc welding power sources, basic characteristics of power sources for various arc welding processes, duty cycles, Selection of a static Volt-Ampere characteristic for a welding process, AC/DC welding power source, DC rectifiers, thyristor controlled rectifiers, transistorized units, inverter systems, Mathematical Problems on Static volt ampere characteristics	
UNIT:3	[08 Hours]
COATED ELECTRODES: Electrode coatings, classification of coatings of electrodes for SMAW, SAW fluxes, role of flux ingredients and shielding gases, classification of solid and flux code wires. METAL TRANSFER & MELTING RATE: Mechanism and types of metal transfer, forces affecting metal transfer, modes of metal transfer, metal transfer in various welding processes, effective of polarity on metal transfer and melting rate	
UNIT:4	[13 Hours]
SOLID STATE WELDING: Theory and mechanism of solid state welding. Techniques and scope of friction welding, diffusion welding, cold pressure welding and ultrasonic welding. High energy rate welding. Analysis of the Process. WELDING TECHNIQUES: Technique, scope and application of the electron beam and laser welding processes. Under water welding-process & problem.	
Teaching Methods: Chalk& Board/ PPT/Video Lectures/Lecture by Industry Expert	
Text Books: 1. R.S.Parmar, "Welding processes & Technology", Khanna Publishers. 2.S.V. Nandkarni, "Modern Arc Welding Technology", Oxford &IDH publishing Co	
Ref. Books: 1. L.M.Gourd, "Principles of Welding Technology", ELBS/ Edward Arnold. 2. Richard L. Little, "Welding & Welding Technology", Mc-Graw Hill. 3.Rossi, "Welding Technology", Mc-Graw Hill

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	TRIBOLOGY	3	0	0	3	F								
Pre -Requisite: Fluid mechanics														
Course Educational Objectives														
CEO1	To expose the student to different types of bearings, bearing materials,													
CEO2	To understand friction characteristics and power losses in journal bearings.													
CEO3	To learn theory and concepts about different types of lubrication.													
CEO4	To learn concept of loss of materials on surfaces and its effects													
CEO5	To design a tribological system with better efficiency													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Rephrase friction characteristics in the field of Tribology													
CO2	Summarize about different theories of lubrication to reduce friction and wear													
CO3	Analyze the tribological issues in the design of machine components and braking systems													
CO4	Evaluate the design a tribological system and estimate optimal performance to develop technical project reports as well technical presentations.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	2	1												
CO2	2	2												
CO3	2	3												
CO4		2	3											
Avg.	1.5	2	0.75											
SYLLABUS														
UNIT:1 (12 Hours) Introduction to Tribology and Factors influencing Tribological phenomena, Properties of materials relevant to friction and wear. Study of various parameters: Viscosity, flow of fluids, viscosity and its variation, absolute and kinematic viscosity, temperature variation, viscosity index, determination of viscosity, different viscometers used. Hydrostatic lubrication: Hydrostatic step bearing, application to pivoted pad thrust bearing and other applications, hydrostatic lifts, hydrostatic squeeze films and its application to journal bearing														
UNIT:2 (12 Hours) Surfaces, Friction and Wear: Surfaces, Friction and Wear: Engineering surfaces - Surface characterization, Contact of engineering surfaces: Hertzian and nonhertzian contact, Contact pressure and deformation in non-conformal contacts. Causes of friction, Stick-slip friction behaviour and friction instability, sliding and rolling friction, frictional heating and temperature rise, Friction measurement techniques. Wear and

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

wear types, Mechanisms of wear, Wear of metals and non-metals. Wear models - asperity contact, constant and variable wear rate, geometrical influence in wear models, wear damage. Wear in various mechanical components, wear measurement and controlling techniques.

UNIT:3 (8 Hours)

Lubrication: Hydrodynamic theory of lubrication: Various theories of lubrication, petroffs equation, Reynold's equation in two dimensions -Effects of side leakage - Reynolds equation in three dimensions, Friction in sliding bearing, hydro-dynamic theory applied to journal bearing, minimum oil film thickness, oil whip and whirl anti - friction bearing

UNIT:4 (8 Hours)

Design of Tribological Elements: Tribological consideration in design, Mechanisms of tribological failures in machines, Design Hydrodynamic bearings, and Performance analysis of gears, seals, piston rings, machine tool slide ways, cams and follower. Surface Engineering for Wear and Corrosion resistance: Diffusion, coating, electro and electro-less plating, hot deep coating, metal spraying, cladded coating, crystallizing coating, selection of coating for wear and corrosion resistance, potential properties and parameters of coating

Teaching Methods: Chalk& Talk/ PPT/Video Lectures/Lecture by Industry Expert

Text Books

1. Fundamentals of Tribology, Basu, SenGupta and Ahuja/PHI
2. Tribology in Industry : Sushil Kumar Srivatsava, S. Chand &Co

Ref. Books

1. Tribology – B.C. Majumdar, Tata McGraw Hill Co Ltd
2. Lubrication - Raymono O. Gunther; Bailey, Bros & Swinfan Ltd.
3. Bearing Systems - Principles and Practice, PT Barwill
4. Dowson D, History of Tribology, Longman London, 1979.

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP
	DESIGN AND ANALYSIS OF HEAT EXCHANGER	3	0	0	3	A

Pre -Requisite: Thermodynamics, Heat Transfer, Design of machine elements

Course Educational Objectives

CEO1	To know common heat exchanger types, their advantages and limitations.
CEO2	To learn how to handle rating and sizing problems in heat exchanger design
CEO3	To analyze various types of heat exchangers providing heat transfer between two or more fluids and acquiring necessary information for the design of heat exchangers.
CEO4	To examine how to consider fouling of surfaces, incorporate fouling in designs, and handle fouling during heat exchanger operation.

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Understand different types of flow, heat exchanger & mechanism of heat exchange.
CO2	Analyze the effectiveness of LMTD approach over AMTD approach based on different factors
CO3	Evaluate the effectiveness of different heat exchangers
CO4	Design and develop Heat Exchangers with different applications along with allied equipments.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	
CO1	2	1	2												1
CO2	2	3	2												
CO3	2	3	2												
CO4	2	2	2												2
Avg.	2	2.25	2												0.75

SYLLABUS

UNIT:1 (12 Hours)
Heat exchanger types, constructional details, Nature of heat exchange, Parallel flow, Counter flow, Cross flow, Concentric tube, Shell and tube, Multiple shell and tube, Compact heat exchanger, Condenser, Evaporator, Regenerator, Recuperator . Overall heat transfer coefficient, Thermal resistance, Efficiency. Temperature Distribution and its implications

UNIT:2 (12 Hours)
LMTD, effectiveness, Overall Heat transfer coefficients, Fouling factor, Scaling factor, Correction factor, NTU method, Flow Distribution, Friction Factor, Pressure Loss, Pumping power, Orifice, Flow nozzle, Diffusers, Bends, Baffles, Effect of Channel

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

Divergence, Manifolds.
UNIT:3 (14 Hours) Heat exchanger fabrication, Tubular versus flat plate, Tube to header joint, Finned surface, Design of Liquid to Liquid heat exchanger, Plate and Frame heat exchanger, Design of Gas to Gas heat exchanger, Tubular regenerators for gas turbine, Regenerator for mobile gas turbine, Recuperators for heat pipe, Design of Liquid to gas heat exchanger, Comparison of fin geometric, Design of fin matrices, Design of automotive radiators.
UNIT:4 (10 Hours) Stress in tubes, Headers sets and Pressure vessels: Differential Thermal Expansion, Thermal stresses, Shear stresses, Thermal sleeves, Vibration, Noise, types of failures. Design Aspects: Heat transfer and pressure loss flow configuration effect of baffles. Effect of deviations from ideality. Design of cooling towers. Types of cooling tower, Wind loads, Dry cooling tower.
Teaching Methods: Chalk& Board/ PPT/Video Lectures/Guest Lectures by Industry Expert & Academia
Text Books 1. Heat and Mass Transfer by P.K. Nag, TMH, 3rd Ed., 2. A.P. Frass and M.N.Ozisik, Heat Exchanger Design', John Wiley & Sons Inc, 1965.
Ref. Books 1. W.M. Kays and A.L. London. Compact Heat Exchangers', 3rd Ed., TMH, 1984. 2. G.Walker, Industrial Heat Exchangers', A basic guide, TMH V Book Co. 3rd Ed., 1980.

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	Q P								
	FIRE AND SAFETY ENGINEERING	3	0	0	3	A								
Pre -Requisite: Basics on Fire Safety														
Course Educational Objectives														
CEO1	Practice fire protection engineering technology regionally, nationally, and internationally in a broad range of modern professional settings.													
CEO2	Actively participate in the development of engineering technology decisions on societal, environmental, economical, and safety issues at the local or global levels.													
CEO3	Learn various uses of fire protective equipments in industries.													
CEO4	Identify various risks and hazards to develop safe work systems.													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Discuss fire dynamics, fire initiation, Combustion effects and classification of various fire fighting equipments.													
CO2	Examine building regulations and fire engineering principles and their application to fire engineered alternative solutions.													
CO3	Explain active and passive fire safety systems and their application.													
CO4	Apply knowledge of the practical design process adopted by the industry													
CO-PO & PSO Mapping

	NON DESTRUCTIVE EVALUATION AND TESTING	3	0	0	3	A

Pre -Requisite: Machining Science Technology

Course Educational Objectives

CEO1	To provide students with a strong knowledge of terms, concepts, principles etc. involved in non-destructive testing.
CEO2	To provide practical training in handling and testing the non-destructive testing equipments.
CEO3	To develop knowledge and skills for interpretation and evaluation of the results.
CEO4	To offer environment to enhance team essential skills for effective careers in the inspection profession

Course Outcomes: *Upon successful completion of this course, students should be able to:*

CO1	Understand the basic theory and principles of NDT methods.
CO2	Use of appropriate measurement techniques and tools to collect data.
CO3	Interpret the results and investigate the possible artifacts.
CO4	Show confidence to take responsibility for on the job training and guidance of trainees and NDT level I personnel.

CO1	2													1
CO2	1	2			2									1
CO3	2	2												1
CO4	1				2									2
Avg.	1.5	1			1									1.25

SYLLABUS

UNIT:1 Introduction to NDT, Comparison between destructive and NDT, [6 Hours]
Importance of NDT, Scope of NDT, difficulties of NDT, future progress in NDT, economics aspects of NDT.

Various physical characteristics of materials and their applications in NDT,
Visual inspection – tools, applications and limitations -Fundamentals of visual testing:
vision, lighting, material attributes, environmental factors.

UNIT:2 [9 Hours]
Liquid Penetrant Testing – Principles, types and properties of liquid penetrants, Developers, advantages and limitations of various methods, Testing Procedure, Interpretation of results. Magnetic Particle Testing- Theory of magnetism, inspection materials , Magnetization methods, Interpretation and evaluation of test indications, Principles and methods of demagnetization, Residual magnetism

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	Q P
	NANO SCIENCE	3	0	0	3	A

Pre -Requisite: Engineering Physics, Engg. Chemistry, IPMEM.

Course Educational Objectives

CEO1	To learn the basic science behind the properties of materials at the nanometre scale, and the principles behind advanced experimental and computational techniques for studying nanomaterials.
CEO2	To teach a knowledge on the state-of-the-art of nano-fabrication methods
CEO3	To know the fundamental principles of nanoscience and its application to engineering.
CEO4	To demonstrate the use of various testing tools that are used in production/synthesis and research/analysis of nano-structured materials

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Define the basic science behind the properties of materials at the nanometre scale, and the principles behind advanced experimental and computational techniques for studying nano materials.
CO2	Demonstrate a comprehensive understanding of state-of-the-art on nano-fabrication methods.
CO3	Analyze the characterization of nano materials by using different testing tools.
CO4	Discuss various applications of Nano materials in societal field.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs

CO1	2	1												
CO2	2	2												
CO3	2	2			1									
CO4	3						2							
Avg.	2.25	1.25			0.25		0.5							

SYLLABUS

UNIT:1 [9 Hours]
 Introduction: History and Scope, Implications for Physics, Chemistry, Biology and Engineering , Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thinfilms-multilayered materials, Applications of Nanomaterials.
 Effect of Nano-dimensions on Materials Behavior: Mechanical properties, Melting Point, Diffusivity, Grain growth characteristics, Enhanced solid solubility, Optical, Magnetic Properties.

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

Accredited by NAAC with a CGPA of 3.28/4 at A+ Grade

Seven UG Programs CSE, ME, CHE, AEIE, ECE, BT & EEE Accredited by NBA

Gunupur - 765022, Dist.- Rayagada, Odisha, INDIA www.giet.edu

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:2	[12 Hours]
Synthesis Routes: Bottom up approaches: Physical Vapor Deposition, Inert Gas Condensation, Laser Ablation, Chemical Vapor Deposition, Molecular Beam Epitaxy, Sol-gel method ,Self assembly, Top down approaches: Mechanical alloying, Nanolithography, Consolidation of Nanopowders: Shock wave consolidation, Hot isostatic pressing and Cold isostatic pressing Spark plasma sintering.	
UNIT:3	[12 Hours]
Tools to Characterize nanomaterials: X-Ray Diffraction (XRD), Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), Scanning Tunneling Microscope (STM), Field Ion Microscope (FEM). Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation.	
UNIT:4	[12 Hours]
Applications of Nanomaterials: Information storage- nanocomputer, molecular switch, super chip, Nano-electronics, Micro- and Nano-electro-mechanical systems (MEMS/NEMS), Nanosensors, Nanocatalysts, Food and Agricultural Industry, Cosmetic and Consumer Goods, Structure and Engineering, Automotive Industry, Water- Treatment and the environment, Textiles, Paints, Energy, Defence and Space Applications, Photostat, printing, solar cell, battery.	
Teaching Methods: Chalk& Talk, Ppt ,video lecture.	
Text Books:	
<ol style="list-style-type: none">1. Nano: The Essentials by T.Pradeep, Mc Graw- Hill Education.2. A.S. Edelstein and R.C. Cammearata, eds., "Nanomaterials: Synthesis, Properties and Applications", Institute of Physics Publishing, Bristol and Philadelphia, 1996.

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	Q P								
	POWER PLANT ENGINEERING	3	0	0	3	A								
Pre -Requisite: Engineering Thermodynamics, Fluid Mechanics														
Course Educational Objectives														
CEO1	To teach principles of thermodynamics, fluid mechanics, and heat transfer to the design and analysis of thermo dynamical systems by considering the environmental issues													
CEO2	To make the student aware of the relevance of environmental different power plants													
CEO3	To teach about the power plant overall issues on practical field													
CEO4	To teach the concept of sources of energy and their optimum utilization													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Understand and analyze the working principle of the components of nuclear, thermal and oil based power plant.													
CO2	Evaluate the performance of nozzle, turbines and economics of power plant.													
CO3	Apply safety measures and pollution control technologies to coal and nuclear power plant													
CO4	Compare and solve power tariffs and costs.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3	3												
CO2	2	3												
CO3	2	3					3							
CO4	2	3												
Avg.	2.25	3					0.75							
SYLLABUS														
UNIT:1 [10 Hours] Introduction to power plants and boilers Layout of Steam , Hydel , Diesel , MHD, Nuclear and Gas turbine Power Plants Combined Power cycles – comparison and selection , Steam boilers and cycles – High pressure and Super Critical Boilers – Fluidised Bed Boilers Fuel and ash handling , Combustion Equipment for burning coal, Mechanical Stokers. Pulveriser, Electrostatic Precipitator, Draught-Different Types, Condenser types, cooling Towers														
UNIT:2 [14 Hours] Flow Through Nozzles Types of nozzles and their area of application & related calculation, critical pressure & Choked flow, super saturated flow. Effect of friction and nozzle efficiency Steam turbines Turbine types, Variation of Pressure and Velocity in different types of turbines, Simple impulse Turbines, Flow through turbine														

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

Accredited by NAAC with a CGPA of 3.28/4 at A+ Grade

Gunupur - 765022, Dist.- Rayagada, Odisha, INDIA www.giet.edu

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

blades and velocity diagram, Pressure -compounded impulse turbines and Velocity compounded impulse turbines. Turbine power and related calculations.
UNIT:3 [12 Hours] Nuclear power plants Basics of Nuclear Engineering, Layout and subsystems of Nuclear Power Plants, Working of Nuclear Reactors : Boiling Water Reactor (BWR), Pressurized Water Reactor (PWR), CANada Deuterium-Uranium reactor (CANDU), Breeder, Gas Cooled and Liquid Metal Cooled Reactors. Safety measures for Nuclear Power plants
UNIT:4 [10 Hours] Energy, economic and environmental issues of power plants Power tariff types, Load distribution parameters, load curve, Comparison of site selection criteria, relative merits & demerits, Capital & Operating Cost of different power plants. Pollution control technologies including Waste Disposal Options for Coal and Nuclear Power Plants
Teaching Methods: Chalk& Board/ Presentation/Video Lectures/Lecture by Industry Expert/Industrial tour
Text Books: 1. Power Plant Engineering, P K Nag. Tata McGraw- Hill ,2007, 3 RD EDITION 2. EI-Wakil M.M ,Power “Plant Technology,” Tata McGraw-Hill 1984,6 TH EDITION
Ref. Books: 1. Power plant Engineering , R K Rajput, LAXMI Publication, 4 TH EDITION 2. K.K.Ramalingam , “ Power Plant Engineering “, Scitech Publications, 2002 3. G.R,Nagpal , “Power Plant Engineering”, Khanna Publishers 1998, 3 RD EDITION

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	COMPOSITE MATERIALS	3	0	0	3	A								
Pre -Requisite: Introduction to Physical Metallurgy														
Course Educational Objectives														
CEO1	To teach basic concept of composites and their classification													
CEO2	To extend a knowledge of applications and selection of different composites in consideration of the properties and characteristics to students													
CEO3	To teach the manufacturing processes of reinforcement fibers and volume fraction effect on matrices of composites													
CEO4	To teach the concept of tailored design philosophy													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Illustrate the concept of composite and Predict elastic properties of long fiber and short fiber composites.													
CO2	Explain fundamental fabrication processes for polymer matrix, metal matrix, and ceramic matrix composites													
CO3	Analyze the strengthening mechanism and structural effect on properties of composite materials for societal application													
CO4	Design different types of composite by apply the micromechanics principles.													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	3												2	
CO2	2												3	
CO3	2					2							2	
CO4	1		3										1	
Avg.	2		0.75			0.5							2	
SYLLABUS														
UNIT:1 [16 Hours]														
Introduction: definitions and classifications; natural composites; role of matrix and reinforcement; factors which determine properties; the benefits of composites. Reinforcements and the reinforcement matrix interface: natural fibers; synthetic organic fibers – aramid, polyethylene; and synthetic inorganic fibers – glass, alumina, boron, carbon, silicon based fibers; particulate and whisker reinforcements, reinforcement-matrix interface – wettability, interfacial bonding, and methods for measuring bond strength														
UNIT:2 [12 Hours]														
Metal matrix composites: Introduction, important metallic matrices; metal matrix composite processing: solid state processing – diffusion bonding, powder metallurgy; liquid state processing – melt stirring, compocasting (rheocasting), squeeze casting,														

GIET UNIVERSITY GUNUPUR, ODISHA

Incorporated by Act 23 of Govt. of Odisha and under approval of UGC & AICTE

Accredited by NAAC with a CGPA of 3.28/4 at A+ Grade

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

liquid infiltration under gas pressure; deposition – spray co-deposition and other deposition techniques like CVD and PVD; in situ processes. Interface reactions. Properties of MMCs – physical properties; mechanical properties like elastic properties, room temperature strength and ductility, properties at elevated temperatures, fatigue resistance. Processing, structure of multi-filamentary superconductors, properties of aluminium reinforced with silicon carbide particles.

UNIT:3 [12 Hours]

Ceramic matrix composites: Introduction; processing and structure of monolithic materials – technical ceramics, glass-ceramics. Processing of ceramics: conventional mixing and pressing – cold pressing and sintering, hot pressing, reaction bonding processes, techniques involving slurries, liquid state processing – matrix transfer moulding, liquid infiltration, sol-gel processing, vapour deposition techniques like CVD, CVI, liquid phase sintering, lanxide process and in situ processes. Processing, properties and applications of alumina matrix composites - SiC whisker reinforced, zirconia toughened alumina; Glass-ceramic matrix composites; Carbon-carbon composites - porous carbon-

UNIT:4 [10 Hours]

Polymer matrix composites: Introduction; polymer matrices – thermosetting, thermoplastic, rubbers. Processing of PMCs, Processing, properties and applications of fibre-reinforced epoxies, PEEK matrix composites, rubber matrix composites. Damping characteristics. Environmental effects in polymer matrix composites. Recycling of PMCs. Micromechanics of unidirectional composites: micromechanics models for stiffness – longitudinal stiffness, transverse stiffness, shear modulus, poisson's ratio.

Teaching Methods: Chalk& Board

Text Books:

1. Composite Materials: Engineering and Science, by Matthews and Rawlings, CRC Press.
2. Composite Materials Science and Engineering, K.K.Chawla, SpringerAn Introduction to composite material, by D.Hull and T.W. Clyne, Cambridge University press.
3. Metal Matrix Composites, Thermomechanical Behaviour by M.Taya, and R.J.Arsenault, Pergamon Press, Oxford.
4. Fundamentals of Metal Matrix Composites by S.Suresh, A.Martensen, and A.Needleman, Butterworth, Heinemann

Ref. Books:

1. An Introduction to composite material, by D.Hull and T.W. Clyne, Cambridge University press.

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	QP								
	MECHATRONICS	3	0	0	3	A								
Pre –Requisite: Basics of Electronics														
Course Educational Objective														
CEO1	To impart the knowledge of Microprocessors, Microcontrollers, and PLCs’ and its role in Mechatronic systems													
CEO2	To introduce the students, the fundamentals of interdisciplinary engineering components and their integration in Mechatronic systems design approach													
CEO3	Be able to do the complete design, building, interfacing and actuation of a mechatronic system for a set of specifications													
CEO4	Relate various signal conditioning units, amplifiers, logic gates and their role in programmable logic controllers													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Model and analyze electrical and mechanical systems and their interconnection.													
CO2	Integrate mechanical, electronics, control and computer engineering in the design of mechatronics systems.													
CO3	Describe mechatronic systems and overview of control systems & actuators													
CO4	Differentiate between various sensors, transducers and actuators and their applications													
CO-PO & PSO Mapping														
COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C	Q P								
	CRYOGENICS	3	0	0	3	A								
Pre -Requisite: Fundamentals of Thermodynamics, Physical Metallurgy & Refrigeration Engineering														
Course Educational Objectives														
CEO1	To familiar with the classification of physics properties of materials at cryogenics parameters.													
CEO2	To make the student understand how to apply cryogenic treatments and cryogenic insulations in the technical application.													
CEO3	To teach the design and analysis the Characterization of cryogenically processed materials.													
CEO4	To familiar with the evaluation& preparation of cryogenic processing of materials for different applications in the real world with a consideration for environmental hazards.													
Course Outcomes: Upon successful completion of this course, students should be able to:														
CO1	Summarize the physics properties of materials at cryogenics parameters and gas liquefaction systems.													
CO2	Apply cryogenic treatments and cryogenic insulations in the technical application.													
CO3	Design and analyze the Characterization of cryogenically processed materials													
CO4	Evaluate Cryogenic processing of materials for different applications in the real world with a consideration for environmental hazards.													
CO-PO & PSO Mapping

SCHOOL OF ENGINEERING AND TECHNOLOGY DEPARTMENT OF MECHANICAL ENGINEERING

UNIT:2	[13 Hours]
Gas Liquification Systems:-Liquefaction systems for Air Simple Linde –Hampson System, Claude System, Heylndt System, Dual pressure, Claude. Liquefaction cycle Kapitza System. Comparison of Liquefaction Cycles Liquefaction cycle for hydrogen, helium and Neon, Critical components of liquefaction systems. Gas Cycle Cryogenic Refrigeration Systems:-Classification of Cryo coolers Stirling cycle Cryo – refrigerators, Ideal cycle – working principle. Schmidt’s analysis of Stirling cycle Various configurations of Stirling cycle refrigerators Integral piston Stirlingcryo-cooler, Free displacer split type StirlingCryo coolers, Gifford McMahanCryo- refrigerator, Pulse tube refrigerator, Solvay cycle refrigerator, Vuillimier refrigerator, Cryogenic regenerators.	
UNIT:3	[12 Hours]
Cryogenic insulation&Vacuum Technology: -Fundamental principles. Production of high vacuum, Mechanical vacuum pumps, Diffusion pumps, Cryo-pumping, Measurement of high vacuum level. Cryogenic Insulation: Heat transfer due to conduction, Evacuated porous insulation Powder & Fibers Opacified powder insulation, Gas filled powders & Fibrous materials Multilayer super-insulation, Composite insulation. Desirable qualities for materials used in cryogenic applications, History and applications of metallic / non-metallic materials, Understanding properties and fabrication processes of superconducting Nb3Sn wires, High temperature superconductors. Characterization of cryogenically processed materials	
UNIT:4	[10 Hours]
Cryogenic processing of materials for Space applications, Superconductivity, Medical applications, Food Preservation-Individual Quick Freezing, Tool Industry, Automobiles etc.Hazards:-Physical hazards, Chemical hazards, Physiological hazards, combustion hazards, oxygen hazards.Safety in handling of cryogenes, care for storage of gaseous cylinders, accidents in cryogenic plants & prevention.	
Teaching Methods: Chalk& Board, PPT, Video Lectures
