TOTAL CREDIT							23		

Subject Code	Title of the subject										L	T	P	C	
21BBSBS11001	Engineering Mathematics-I										3	1	0	4	
Course Educational Objectives															
CEO1	To find critical points, and use them to locate maxima and minima.														
CEO2	To provide the standard methods for solving differential equations.														
CEO3	To study Fourier series and to express a function in Fourier series.														
CEO4	To use matrices, determinants and techniques for solving systems of linear equations in the different areas of Linear Algebra.														
Course Outcomes: Towards the end of the course students will be able to :															
CO1	Implement the engineering problems using the concept of Partial differentiation and series and to understand its application.														
CO2	Solve the initial value and boundary value problem of ODE related to Electrical circuit.														
CO3	Execute the technique of Fourier series for applying in Engineering applications.														
CO4	Find the Eigen value and vector of a matrix by using properties of linear algebra														
CO-PO & PSO Mapping															
COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	1	2													
CO2	2	3													
CO3	1	3													
CO4	2	3													
SYLLABUS															
UNIT-I												(10 Hours)			
MULTI-VARIABLE CALCULUS															
Limit and Continuity, Partial differentiation, Euler's theorem, Total derivative, Taylor's theorem for function of two variable (without proof), Maxima and Minima for function of two variables, Differentiation under integral sign (Leibnitz rule).															
UNIT- II												(12 Hours)			
DIFFERENTIAL EQUATIONS-I															
Ordinary differential Equations: First order and first degree differential equations and their method of solving, Application to Electrical circuits and heat conduction. DIFFERENTIAL EQUATIONS-II															
Linear differential equations of higher order and their different methods of solutions (operator methods). Second order linear differential equations and their solutions: Euler Cauchy equation, solution by undermined coefficient method and variation of parameters. Simple application to electrical circuits.															

UNIT -III**(8 Hours)**

Fourier series, Fourier expansion of functions of arbitrary period, Even and odd functions, Half Range Expansion.

UNIT -IV**(10 Hours)****LINEAR ALGEBRA:**

Matrices, Types of matrices, Rank of matrix, Eigen values and Eigen vectors, Cayley – Hamilton theorem (without proof), system of linear equations, Orthogonal matrices, Complex matrices, Hermitian and skew-Hermitian matrices, Unitary matrices, similarity of matrices. Quadratic forms and Canonical forms.

Prescribed Books:

1. Advanced Engineering Mathematics by E. Kreyszig, Tenth Edition, Willey
2. Differential Calculus by Santi Narayan and P.K .Mittal, S.Chand Publications

References:-

1. Higher Engineering Mathematics by BS Grewal : Khanna Publishers, New Delhi.
2. Higher Engineering Mathematics by B.V.Ramana, McGraw Hills Education
3. Advanced Engineer methods by N. P. Bali & Manish Goyal
4. Differential Calculus by J. Sinha Roy & S. Padhi.
5. Differential Calculus” by Vinay Kumar, 3rd Edition 2021, Mc Graw Hill,

Subject Code	Title of the subject											L	T	P	C	
21BBSBS110B1	Engineering Mathematics-I (ONLY FOR BIOTECH)											3	1	0	4	
Course Educational Objectives																
CEO1	Concept about the sets, tautology, contra positive and truth table.															
CEO2	To use matrices, determinants and techniques for solving system of linear equations in Linear Algebra.															
CEO3	To Provide the standard methods for differentiation.															
CEO4	To Provide the standard methods for integration.															
Course Outcomes: Towards the end of the course students will be able to :																
CO1	Understand the concept about logic, set theory and proof by method of induction.															
CO2	Find the Inverse and solution of liner equations by using matrix methods.															
CO3	Evaluate the differentiation of standard functions and it"s application.															
CO4	Evaluate the integration of standard functions and it"s application.															
CO-PO & PSO Mapping																
COs	PROGRAMME OUTCOMES												PSOs			
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	
CO1	1	2														
CO2	2	3														
CO3	1	3														
CO4	2	3														
SYLLABUS																
UNIT-I														(10 Hours)		
LOGIC AND SET THEORY:																
Introduction , statement, Negation, Conjunction, Disjunction, Conditional, converse , bi-conditional, Inverse, Contra positive , Truth table, Tautology ,Methods of proof, sets, sub set and power set, Van Diagrams and Cartesian product of sets.																
UNIT-II														(12 Hours)		
LINEAR ALGEBRA:																
Definition of Matrices, Addition, Subtraction, Multiplication Matrices, Types of matrices, Rank of matrix, Determinants of a matrices, Minors and Cofactors, Inverse of matrix, Transpose of Matrix and Properties, system of linear equations Cramer"s rule, symmetric and skew symmetric matrices ,Orthogonal matrix.																

UNIT-III**(10 Hours)****DIFFERENTIAL CALCULUS:**

Definition of function, limit and continuity, Simple problems on limit, Simple problems on continuity, Differentiation of x^n , e^x , $\sin x$ & $\cos x$ from first principle, Derivatives of sum, difference, product and quotient of two functions, Differentiation of functions of functions (Simple problem based on it), Logarithmic differentiation (Simple problem based on it), Differentiation by substitution method on it,

UNIT- IV**INTEGRAL CALCULUS :****(10 Hours)**

Integration of simple functions, Integration of Product of two functions, Integration by substitution method, Integration by substitution method, Definite Integral (simple problems based on it), Integration by parts, Integration by partial fraction, Area under simple well-known curves (simple problems based on it).

Prescribed Books:

1. Advanced Engineering Mathematics by E. Kreyszig, Tenth Edition, Willey
2. Differential Calculus by Santi Narayan and Mittal, S.Chand Publications

Reference:-

1. Higher Engineering Mathematics by BS Grewal : Khanna Publishers, New Delhi.
2. Higher Engineering Mathematics by B.V.Ramana, McGraw Hills Education
3. Advanced Engineer methods by N. P. Bali & Manish Goyal.
4. Elements Of Mathematics

Subject Code	Title of the subject										L	T	P	C		
21BBSBS12001	Engineering Mathematics-II										3	1	0	4		
Course Educational Objectives																
CEO1	To focus on partial derivative and its methods.															
CEO2	To make them understand about laplace and fourier transform.															
CEO3	To calculate the gradients and directional derivatives of functions of several variables															
CEO4	To introduce the concept of Vector differentiation and integration that finds applications in various fields like solid mechanics, fluid flow, heat problems and potential theory															
Course Outcomes: <i>Towards the end of the course the students will be able</i>																
CO1	To know how to solve the partial differential equation by suitable method.															
CO2	I. To Solve Ordinary differential and integral equation by using Laplace transform, II. Execute the technique of Fourier Integral and transform for learning in advanced Engineering Mathematics.															
CO3	To relate gradient, curl and divergence and its application in fluid dynamics.															
CO4	To evaluate multiple integrals by using Green's, Stokes" and divergence theorem to give physical interpretation of the curl and divergence of a vector field .															
CO-PO & PSO Mapping																
COs	PROGRAMME OUTCOMES												PSOs			
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	
CO1	3	2														
CO2	2	3														
CO3	1	3														
CO4	2	3														
SYLLABUS																
UNIT - I (08 Hours)																
INTRODUCTION OF PARTIAL DIFFERENTIAL EQUATIONS:																
Formation of Partial differential equations, linear partial differential equation of first order: Lagrange"s linear differential equation, Non-Linear partial differential equation of first order by Charpit"s method.																
UNIT-II (12 Hours)																
LAPLACE TRANSFORMS:																
Definition, existence of Laplace Transforms, Properties of Laplace Transforms, Evaluation of integrals by Laplace Transforms, Inverse transforms, convolution theorem, transforms of unit step function, unit impulse function, and periodic function. Solution of ordinary differential equations by Laplace Transform, Definition of Fourier Integral and Fourier transform																
UNIT - III (8 Hours)																
VECTOR DIFFERENTIAL CALCULUS:																
vector and scalar functions and fields, Derivatives, Curves, tangents and arc Length, gradient, divergence, curl and their simple application.																

UNIT - IV**(12 Hours)****VECTOR INTEGRAL CALCULUS:**

Definition and evaluation of double integration and triple integration, Evaluation of line integral, Surface integral and volume integral and their applications, Transformations theorems- Green's Theorem in plane, Stoke's Theorem, Gauss Divergence Theorem and their applications.

Prescribed Books

1. Advanced Engineering Mathematics by E. Kreyszig, John Wiley & Sons Inc. 10th Edition

References:

1. Higher Engineering Mathematics by B. V. Ramana, Mc Graw Hill Education.
2. Higher Engineering Mathematics by BS Grewal : Khanna Publishers, New Delhi.
3. Advanced Engineering mathematics by H. K. Dass.
4. Differential Calculus by J. Sinha Roy & S. Padhi.

Subject Code	Title of the subject										L	T	P	C	
21BBSBS120B1	Engineering Mathematics-II (ONLY FOR BIOTECH)										3	1	0	4	
Course Educational Objectives															
CEO1	To focus on coordinate system														
CEO2	To study vector function and scalar function in vectors.														
CEO3	To provide the standard methods for solving algebraic equations.														
CEO4	To study the probability and it's properties.														
Course Outcomes: Towards the end of the course the students will be able to															
CO1	Understand the concept of straight-line and circle and application.														
CO2	Find the gradient, divergence, curl and their simple application.														
CO3	Solve the algebraic equations by using different methods and also understand the concept of interpolation.														
CO4	Understand the concept of conditional probability and testing of hypothesis.														
CO-PO & PSO Mapping															
COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3	2													
CO2	2	3													
CO3	1	3													
CO4	2	3													
SYLLABUS															
UNIT – I														(10 Hours)	
CO-ODINATE GEOMETRY															
Straight Lines: Introduction, Slope of a line and angle between two lines. Various forms of equations of a line: parallel to axes, point-slope form, slope-intercept form, two point form, intercepts form and normal form. General equation of a line.															
Cirlces : circle, Equation of circle whose centre and radius is known, General equation of a circle, equation of tangent and normal Equation of circle passing through three given points, Equation of circle whose diameters is line joining two points (x_1, y_1) & (x_2, y_2) ,															
UNIT - II														(8 Hours)	
VECTORS															
vectors and scalars, Types of Vectors, Algebra of vectors, Position Vectors, Scalar product , vector product, unit vectors, Scalar triple product and vector triple product, vector functions ,Derivatives, Curves, tangents and arc Length, gradient, divergence, curl and their simple application.															
UNIT -III														(10 Hours)	
NUMERICAL METHODS :															
Errors, Solving of algebraic and transcendental equations by using bisection method, fixed point iteration and Newton-Raphson"s method. Finite Differences, Newton"s forward and backward interpolation formula (without proof), Newton divided difference interpolation, Lagrange interpolation.															

UNIT-1V**(12 Hours)****PROBABILITY AND STATISTICS**

Events, Sample space , definition of probability, Axioms of probability, Addition theorem of probability with examples, Multiplication theorem of probability with illustrate examples. Conditional probability, Bay"s theorem with examples.

Mean, Median, Mode, Testing of hypothesis (chi-square test), Regression and correlation analysis, fitting of straight line by least square method.

Prescribed Books:

1. Advanced Engineering Mathematics by E. Kreyszig, Tenth Edition, Willey
2. Differential Calculus by Santi Narayan and Mittal, S.Chand Publications

Reference:-

1. Higher Engineering Mathematics by BS Grewal : Khanna Publishers, New Delhi.
2. Higher Engineering Mathematics by B. V. Ramana, McGraw Hills Education
3. Advanced Engineer methods by N. P. Bali & Manish Goyal.
4. Elements Of Mathematics

Subject Code	Name of the Subject	L	T	P	C										
21BBSHS11001	Communicative English and Soft Skills	2	0	0	2										
Course Educational Objectives															
CEO1	To promote communication skills and soft skills.														
CEO2	To enhance the employability and entrepreneurial skills														
CEO3	To motivate the students to participate in group discussions without stage fear														
Course Outcomes: Towards the end of the course, the students will be able to:															
CO1	Understand the importance of effective communication for professional development														
CO2	Application of vocabulary and grammar for effective communication.														
CO3	Application of Information and Communication Technology(ICT) for career development														
CO4	Nurture and motivate positive attitude towards placements.														
CO-PO & PSO Mapping															
COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1										3					
CO2										3					
CO3										3					
CO4										3					
SYLLABUS															
UNIT -1 Importance of English for Communication in the 21st Century (9 hours)															
<p>Role of English in enhancing employability and entrepreneurial skills (1) The Nature and Scope of Communication (1) 1. 3 English Language skills, i.e., LSRW skills ; appropriate use of skills in communicative contexts (1+1+1) The process of communication and factors that influence communication: Sender, receiver, channel, code, topic, message, context, feedback, noise, filters and barriers (steps such as Ideation, Encoding, Transmission, Decoding, etc. need to be dealt with); Audience and purpose (1 + 1) Types of Communication: General and Professional Communication; Written communication and Spoken communication. (1 + 1)</p>															
UNIT -2. English Vocabulary, Grammar & Usage (8 hours)															
<p>Synonyms and Antonyms 1 Words often confused 1 Technical terms and one word substitutes 1 Sentence Structure and syntax 1 Common errors in English. 1+1 Communicative use of the Passive Voice 1 Difference between American, British and Indian English (Vocabulary based) 1</p>															
UNIT- 3. Introduction to Corporate Communication (11 hours)															
<p>3.1 Seven C"s communication and Ten C"s of Non-communication. 1 3.2. Intercultural and cross cultural communication. 1 Corporate Communication - Direction of Communication: Downward Communication, Upward Communication, Horizontal/Lateral Communication, Diagonal Communication 1 + 1 Communication challenges in today"s work place: Advances in technology; culturally diverse workforce; Team-based organizational Settings; how to overcome these challenges 1 + 1 Information and Communication Technology (ICT) and the corporate world, Power point presentation using multimedia; Internet and Intranet. 1+1 Corporate/Business etiquette: Mobile etiquette, proper handshake, body language, social etiquette. 1 + 1 How to handle difficult conversations at work 1</p>															

UNIT- 4 Soft skills Development.**(8 hrs)**

4. 1 Importance of soft skills in personal and professional life 1+1
Time and stress management. 1+1
Leadership, team work and net-working skills 1+1
4.4. Lateral thinking and problem solving skills; Emotional Intelligence 1+1

Teaching Methods: Chalk& Board/ PPT/Video Lectures

Text Books:

1. An Introduction to Professional English and Soft Skills by B. K. Das et al., Cambridge University Press.
2. Communicative English for Engineers and Professionals by Nitin Bhatnagar and Mamta Bhatnagar. Published by DK/Pearson.
3. Practical English Usage. Michael Swan, OUP, 1995

Reference Books:

1. Technical Communication , Principle and Practice by Meenakshi Raman & Sangeeta Sharma, Oxford University Press
2. Business Communication Today by Bovee, Courtland L., Thill, John V. Prentice Hall.
3. The Ace of Soft Skills: Attitude, Communication and Etiquette for Success by Gopalaswamy Ramesh and Mahadevan Ramesh. Pearson.
4. Oxford Guide to English Grammar by John Easthood. Oxford University Press.
5. 365 Ways to Change Your World by Norman Vincent Peale by Orient Paperbacks.
6. Soft Skills For Your Career by Kalyani Samantray Oxford University Press, 2016.

Lab Code	Name of the Lab	L	T	P	C										
21BBSHS11101	Communicative English and Soft Skills Laboratory	0	0	2	1										
Course Educational Objectives															
CEO1	To develop the communication skills of the students, especially the Listening and Speaking skills.														
CEO2	To develop the vocabulary and usage skills of students by practice.														
CEO3	To enable students to participate in group discussions through proper listening and speaking.														
CEO4	To enable students eliminate grammatical mistakes in speech and writing.														
Course Outcomes: <i>The students will be able to:</i>															
CO1	Build up a good range of vocabulary and know proper usage.														
CO2	Become active listeners with good comprehension, participation, and evaluation.														
CO3	Develop conversational and public speaking competencies.														
CO4	Use grammar for effective speaking in GD and other formats of speaking.														
CO5	Eliminate stage fear and hesitancy in speaking.														
CO-PO & PSO Mapping															
COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1										3					
CO2										2					
CO3										3					
CO4										3					
CO5										2					
SYLLABUS															
Phonetics & Listening Skills 10 hours = 5 classes [2 listening tests x 10 marks=20 marks]															
Vowels, diphthongs, consonants, consonant clusters; The International Phonetic Alphabet (IPA); phonemic transcription; Problem sounds; Syllable division and word stress; Sentence rhythm and weak forms; Contrastive stress in sentences to highlight different words; Intonation: falling, rising, and falling-rising tunes; Listening to Newspaper reading/Video, etc. Listening with a focus on pronunciation (ear-training): segmental sounds, stress, weak forms, intonation & Listening for comprehension. Reading comprehension skills: Identifying main ideas and details; analyzing text structure; inferencing underlying ideas/meanings: speculating what may happen next in the reading text; integrating reading to listening and speaking activities.															
Speaking skills 10 hours = 5 classes [4 speaking tests x 10 = 40 marks]															
<ul style="list-style-type: none"> • Topics for 1 minute, 2 minutes, and 5 minutes speaking; Pictures, Quotations, Attitude-testing Questions may be used. • Responding to handouts, articles, books magazines and newspapers. • Summarizing a reading text. Individual/Group presentations discussion on given topics															
Soft skills development 10 hours = 5 classes [4 assignments x 10 = 40 marks]															
<ul style="list-style-type: none"> • Basic Writing skills 1+1+1 • Time & stress management 1+1 • Lateral thinking & problem solving 1+1 • Practice with GD techniques 1+1+1 															
Teaching Methods: Chalk& Board/ PPT/Video Lectures															
Text/Reference Books:															
1. <i>Form and Finesse, Business Communication and Soft skills</i> by Shruti Das, Published by Orient Black Swan.															
2. <i>Business and Corporate Soft skills developed</i> by Rai Tech. University (PDF available)															
3. <i>Spoken English (with CD)</i> . Sasikumar V and P V Dhamija. New Delhi: Tata McGraw-Hill Education Pvt. Ltd. (2 nd Ed.)															

Subject Code	Title of the subject	L	T	P	C
21BBSHS12001	Communicative English and Technical Communication	2	0	0	2

Course Educational Objectives

CEO1	To develop the communication skills and soft skills of the students
CEO2	To enhance the ability of the students to develop employability and entrepreneurial skills
CEO3	To enable students to successfully participate in GDs and PIs
CEO4	To make students communicate effectively using technologies and techniques
CEO5	To inculcate a sense of professionalism in students

Course Outcomes: *The students will be able to:*

CO1	Understand the importance of technology in communication
CO2	Develop career conscious leading to preparation for career.
CO3	Understand the nature and scope of corporate communication and try to be industry-ready.
CO4	Prepare professional documents for career needs (e.g. Job application letter, résumé) and professional needs (e.g., Memo and E-mail writing)

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1										3					
CO2										3					
CO3										3					
CO4										3					

SYLLABUS

UNIT 1 Introduction to Technical Communication

7 hours

Essence of Technical Communication 1

Nature and Scope of Technical Communication: 1 +1 +1

Technical Communication -- Interactive and Adaptable; Technical Communication -- Reader Centered; Technical Communication and teamwork; Technical Communication Has Ethical, Legal, and Political Dimensions; Technical Communication - its International and Cross-Cultural nature.

Need of Technical communication for career development 1

Computer Assisted Language Learning (CALL) - Self learning through use of technology, Effectiveness of CALL for developing English Language Skills; Use of Internet 1 +1

UNIT 2 Workplace Communication

15 hours

2.1. Career making: Setting Goals, SWOT analysis 1

Preparing a Résumé: Elements of a Résumé; Types of Résumés: Chronological Résumé,

Functional Résumé; Use of job portals 1 +1 +1

Effective Job Application Letter/Cover letter 1 +1

Group Discussion 1+1+1

Job Interview 1+1

Effective Oral Presentation 1+1

Handling a Meeting 1+1

UNIT 3 Technical Approach to Reading	6 Hours
Know your Reading speed; Advantages of speed reading 1 SQ4R Techniques of Reading 1+1 3.3. Techniques of Rapid reading: skimming, scanning, inferencing 1+1 3.4 Understanding coherence and cohesion 1	
UNIT 4 Technical Writing	10 hours
Writing a technical paper 1+1 Writing business letters - significance, purpose, structure and elements, layout; types of business letters 1+1 Email Etiquette 1 Business Reports and Technical proposals 1+1+1 Using the Social media for better communication 1+1	
Teaching Methods: Chalk& Board/ PPT/Video Lectures	
Text Books:	
1. Form and Finesse, Business Communication and Soft skills by Shruti Das, Published by Orient Black Swan. 2. Business Communication Today by Bovee, Courtland L., Thill, John V. Prentice Hall. 3. Technical Communication Today by Richard Johnson-Sheehan. Edition 5. Pearson. 4. Communicative English for Engineers and Professionals by Nitin Bhatnagar and Mamta Bhatnagar. Published by DK/Pearson.	
Reference Books:	
1. Basic Communication Skills for Technology by Andre J. Rutherford, Pearson Education Asia, Patparganj, New Delhi. 2. Business Communication by Varinder Kumar and Bodh Raj. Kalyani Publishers. 3. A Textbook of English Phonetics for Indian Students by T. Balasubramanian 4. Technical Communication , Principle and Practice by Meenakshi Raman &Sangeeta Sharma, Oxford University Press 5. How to Read better and Faster by Norman Lewis. 4th Edition. Publisher: Crowell. 6. Soft Skills For Your Career by Kalyani Samantray OXFORD UNIVERSITY PRESS, 2016	

Subject Code	Name of the Subject	L	T	P	C
21BBSHS12101	Communicative English and Technical Communication Laboratory	0	0	2	1

Course Educational Objectives

CEO1	To enable students to successfully participate in GDs and Pls.
CEO2	To make students communicate effectively by classroom practice.
CEO3	To inculcate a sense of professionalism in students

Course Outcomes: The students will be able to:

CO1	Prepare professional documents for career needs (e.g. Job application letter, résumé) and professional needs (e.g., Memo and E-mail writing)
CO2	Effectively participate in GD and PI.
CO3	Emerge as an effective presenter/public speaker
CO4	Understand the practical needs at workplace (e.g., organize a meeting)

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1										3					
CO2										3					
CO3										2					
CO4										3					

SYLLABUS

1. Writing an Effective Job Application Letter/Cover letter	4 hours
2. Writing a winning resume and posting in job portals	4 hours
3. Group Discussion, case studies and problem statement	4 hours
4. Job Interview, versant test, video resumes	4 hours
5. Oral presentation	4 hours
6. Organizing a Meeting	4 hours
7. Practice Vocabulary Exercises	4 hours
8. Pictorial Demonstration	2 hours
9. Profiling a company	4 hours
10. Summarizing books/research paper/news report	2 hours

Text Books:

1. Form and Finesse, Business Communication and Soft skills by Shruti Das, Published by Orient Black Swan.
2. Business Communication Today by Bovee, Courtland L., Thill, John V. Prentice Hall.
3. Technical Communication Today by Richard Johnson-Sheehan. Edition 5. Pearson.
4. Communicative English for Engineers and Professionals by Nitin Bhatnagar and Mamta Bhatnagar. Published by DK/Pearson.

Reference Books:

1. Basic Communication Skills for Technology by Andre J. Rutherford, Pearson Education Asia, Patparganj, New Delhi.
2. Business Communication by Varinder Kumar and Bodh Raj. Kalyani Publishers.
3. A Textbook of English Phonetics for Indian Students by T. Balasubramanian
4. Technical Communication , Principle and Practice by Meenakshi Raman &Sangeeta Sharma, Oxford University Press
5. How to Read better and Faster by Norman Lewis. 4th Edition. Publisher: Crowell.
6. Soft Skills For Your Career by Kalyani Samantray OXFORD UNIVERSITY PRESS, 2016

Course Code	Course Title	L	T	P	C
21BBSES11003	Programming for Problem Solving	2	0	0	2

Pre -Requisite: computer basics.

Course Educational Objective

CEO1: To formulate algorithm, translate into program and then execute the programs for verifying its correctness.

CEO2: To analyze a problem for knowing its efficiency and decompose it into functions using divide and conquer approach.

Course Outcome: student can able to

CO1	Formulate simple algorithms for arithmetic and logical problems and translate into programs.
CO2	Understand and develop programs using loop, arrays and analyse its complexity.
CO3	Understand and develop programs using strings, functions and recursions.
CO4	Develop programs using pointers and structures, and understand their functionality.

CO-PO MAPPING

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	1									
CO2	1	3	2									
CO3	1	3	3									
CO4	2	2	3									

UNIT- I (10 Hours)

Programming: Introduction to Structured Programming Approach, Basic structure of C program, C compilers, Compilation and Execution Process, Error debugging.

C Tokens, keywords, identifiers, data types, constants, variables, standard I/O statements, Operators classifications, Operator precedence and associativity, Implicit and Explicit type casting.

Control Flow Statements: **Selection Logic:** if, if..else, else if ladder, nested if

UNIT- II (10 Hours)

switch..case, **Iteration Logic:** while, do-while and for loop, break, continue, nested loop. **Arrays:** 1-D Array: declaration, initialization, array operations, 2-D Array: declaration, Initialization, 2-D array operations

UNIT- III (10 Hours)

Character arrays and Strings: String handling operations, strcmp(), strcat(), strcpy(), strlen().

User Defined Functions: Function categories, Parameter passing in functions, Passing arrays to functions, Recursive functions, storage classes

UNIT- IV (10 Hours)

User Defined Data Types: Structures: Declaration and initialization of structures, accessing structure elements, nested structures, structures and arrays, structures and functions, typedef **Pointers:** Declaration and initialization of pointers, Pointer arithmetic, Pointer and Arrays, call by value and call by address, Function returning pointer, pointer to structure, Dynamic memory allocation.

Text Books:

- 1) E. Balaguruswamy, Programming in ANSI C, 7th edition, Tata McGraw-Hill
- 2) Let us „C“ by Yashwant Kanethekar, 16th edition, BPB Publications
- 3) Byron Gottfried, Schaum's Outline of Programming with C, 3rd edition, McGraw-Hill.

References:

- 1) Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language, 2nd edition, Prentice Hall of India
- 2) Programming in C, by Reema Thareja, 2nd edition, OUP India
- 3) C Programming and Coding by swatisaxena, BPB Publications.

Course Code	Course Title	L	T	P	C
21BBSES11103	Programming for Problem Solving Laboratory	0	0	4	2

Pre -Requisite:

Course Educational Objective

CEO1: To develop programs for problems on different applications of array, functions, Pointers and structure.

CEO2: To analyse different problems by comparing and implementing in programming.

Course Outcome

CO1	To understand operating system and its simple commands, writing programs, compilation, debug and execution process.
CO2	To develop programs using loop controls, arrays and understand the complexity using different programs.
CO3	To develop programs using functions and recursive function by decomposing a problem and analyse them.
CO4	To Solve numerical problems, develop different programs using pointers, structures and analyse their functionality.

CO-PO MAPPING

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	3	1									
CO2	1	2	2	1								
CO3	1	2	2	1								
CO4	1	2	2	1								

Lab Experiment 1: Familiarization with programming environment

- 1) Introduction to OS: Before starting experiments explain the facilities and operations of OS.
- 2) Introduction to the C compiler, Compilation and Execution Process & writing simple programs.

Lab Experiment 2: Simple computational problems using arithmetic expressions.

- 1) WAP to input radius of a circle and Find the area, perimeter of it.
- 2) WAP to input two numbers and swap them without using intermediate variable.

Lab Experiment 3: Simple computational problems using arithmetic expressions.

- 1) Write a program to accept Fahrenheit and calculate its equivalent Celsius.
- 2) WAP to input three unequal numbers and find the greatest using conditional operator.

Lab Experiment 4: Problems involving if, switch

- 1) Write a program to input a lower case alphabet and test whether it is vowel or consonant.(using else..if and switch both)
- 2) Write a program to find the greatest among three numbers.(using else..if and switch both)

Lab Experiment 5: while, do..while and for loops:

- 1) Write a program to find the Greatest Common Divisor of two integers using while statement.
- 2) Write a program to accept a positive integer and test it for Armstrong or not using do..while statement.

Lab Experiment 6: Nested Loop

- 1) Write a program to calculate the following sum using nested for statement: Sum = $1 - (x^2)/2! + (x^4)/4! - (x^6)/6! + (x^8)/8! - (x^{10})/10!$
- 2) Write a program to generate the following pyramid using nested for statement:

```

1
1 2 1
1 2 3 2 1
1 2 3 4 3 2 1

```

Lab Experiment 7: 1D Array interaction

- 1) Write a program to accept 10 integers in to an array and find largest and smallest integers present in them.
- 2) Write a program to input 10 elements into an array. Then search for a given value in the array to know its existence.

Lab Experiment 8: 2D Array interaction

- 3) Write a program to input values into two matrices A(3x4), B(4x3). Perform matrix multiplication and display the resultant matrix.
- 4) Write a program to input two strings and test whether they are equal or not using string handling functions.

Lab Experiment 9: User Defined Functions

- 1) Write a C program which contains three UDF's namely add(), subtract() and multiply(). Each function accepts two integers as their arguments and calculate and return the results
- 2) Write a program to create an UDF and test a number is prime or not.

Lab Experiment 9: Recursive Functions

- 1) Write a program to accept 10 elements into an integer array. Find the largest element present using recursive function.
- 2) Write a program to generate Fibonacci series using a recursive function.

Lab Experiment 10: structures

- 1) Write a program to store 11 cricket players' details into an array of structure. The structure having member's player name, team name and batting average. Displays the name of players whose batting average is ≥ 30 .
- 2) Write a program to create a structure COMPLEX. Input two complex numbers using UDF and find the sum of them.

Lab Experiment 11: Pointers and Dynamic Memory Allocation

- 1) Write a program to create user defined function called swap having two integer pointers as its arguments and it has no return value. Call this function using call-by-address.
- 2) Write a program to store „n integers using dynamic memory allocation. Find the average value of the integers using a user defined function.

Lab Experiment 12: structure with pointer

- 1) Write a program create a structure PRODUCT having members Product no, Name and Price. Using a pointer Input 5 product details into a structure array and then display those products whose price is > 1000 rupees.
- 2) Write a program to create a structure EMPLOYEE to store N employee details i.e: employee no, name, salary. Display only those employee names whose salary ≥ 50000 .

Teaching Methods: Chalk & Board/ PPT/Video Lecture

- A case study can be given to each student for each UNIT.
- A Mini Project can be given which the student have to do during the semester break.

Text Books:

- 4) E. Balaguruswamy, Programming in ANSI C, 7th edition, Tata McGraw-Hill
- 5) Let us „C“ by Yashwant Kanethkar, 16th edition, BPB Publications
- 6) Byron Gottfried, Schaum's Outline of Programming with C, 3rd edition, McGraw-Hill

References:

- 4) Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language, 2nd edition, Prentice Hall of India
- 5) Programming in C, by Reema Thareja, 2nd edition, OUP India
- 6) C Programming and Coding by swatisaxena, BPB Publications.

Course Code	Course Title	L	T	P	C
-------------	--------------	---	---	---	---

21BBSES12003	DATA STRUCTURE AND ALGORITHMS	2	0	0	2	
Pre -Requisite: Basic knowledge of Algorithms						
Course Educational Objective						
CEO1: Develop algorithms for performing different operations on arrays, stack, Queue, linkedlist. Analyze the difference between them and understand different applications. Understand different searching and sorting methods and applications.						
CEO2: Understand and analyze Binary search Tree, AVL Tree, Heap Tree and their applications. Understand the memory representation of graph, its traversal methods and applications. Analyze the Hashing techniques in compare with other sorting techniques.						
Course Outcome: student can able to						
CO1	Develop algorithms for performing different operations on 1D array, matrix, stack, Queue, analyze the difference between them and understand different applications.					
CO2	Understand different searching and sorting methods, Linked lists and them compare them in terms of performance and applications.					
CO3	Understand the Binary Tree and its memory representation; analyze Binary search Tree and its applications, compare the BST with AVL Tree, Heap Tree and examine the advantages.					
CO4	Understand the memory representation of graph; analyze traversal methods and applications of graph. Analyze the Hashing techniques in compare with other sorting techniques.					

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	2	2									
CO2	3	2	3									
CO3	3	3	3									
CO4	2	3	2									

UNIT- I	(11 Hours)
<p>Basic concepts: Data abstraction, Data structures and types. Algorithm specification, 1D array: operations, 2D array: row major order and column major order Stack: Basic concepts, operations and implementation of stack using arrays, Mathematical procedure for conversions of arithmetic expressions. Applications of stack: infix to postfix conversion and postfix evaluation. Queue: Linear queue, operations and implementation using arrays, circular queue and its operations, Basics concepts of Double ended Queue and priority queue</p>	
UNIT- II	(11 Hours)
<p>Searching: Linear search and Binary search on elements in a linear array. Sorting: Bubble sort, Insertion sort, Selection sort using linear array. Linked Lists: Basic concepts and operations of single linked list, linked stack, linked queue, circular single linked list, and Doublelinked list. Basic concept of Circular double linked list.</p>	
UNIT- III	(11 Hours)
<p>Trees: Introduction, Terminology, Binary Trees, Memory Representation of Binary Trees using arrays and linked lists, Binary Tree traversal methods(recursive and non-recursive) , Construction of binary tree using in-order & pre-order sequences , in-order & post-order sequence. Expression Tree, Construction of expression tree using stack. Binary Search Trees: Algorithm for construction, searching and insertion operation, Introduction to Height Balanced trees, Balance factor, Balancing the BST by rotations during insertions of a node.</p>	

UNIT- IV**(11 Hours)**

Heaps: Introduction to binary heaps, definition of a Max-heap, Min-heap, creating Max-Heap Tree using insertion, Graphs: Terminologies, Memory Graph representation - Adjacency matrix, Incidence Matrix, Linked Representation, path matrix, Warshall's Algorithm to find path matrix, Graph Traversals (BFS & DFS), Topological Sorting

Hashing: Hashing Functions: Division, Mid-square, Folding methods. Collision, linear probing, chaining

Teaching Methods: Chalk& Board/ PPT

Text Books:

1. "Fundamental of Data Structure" (Schaums Series) Tata-McGraw-Hill.
2. Pai: "Data Structures & Algorithms; Concepts, Techniques & Algorithms "TataMcGraw Hill.
3. Gilberg and Forouzan: "Data Structure- A Pseudo code approach with C" by Thomsonpublication

Reference Books:

1. "Fundamentals of data structure in C" Horowitz, Sahani& Freed, Computer SciencePress.
2. "Data Structures and algorithms" by Narasimha Karumanchi, CareerMonk Publications
3. "Data structures through C in depth" by S.K.Srivastava, BPB Publications

Subject Code	Name of the Subject	L	T	P	C
21BBSES12103	DATA STRUCTURE AND ALGORITHMS LABORATORY	0	0	4	2

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Understand the concepts of algorithms and implement in developing the programs for different operations of 1D array
CO2	Develop programs for performing different operations on matrix, analyze the them and understand their applications.
CO3	Design code for stack and queue operations and analyze their performance.
CO4	Develop the codes for different operations on linked list, implement concepts or stack and queue using linked list and compare them.

CO-PO Mapping

COs	PROGRAMME OUTCOMES												PSOs			
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	
CO1	2	2	3													
CO2	2	3	3													
CO3	3	2	2													
CO4	2	2	1													

SYLLABUS

Experiment-1(functions)

Q1) Write a program to create methods for performing addition, subtraction, multiplication and division on 2 integers.

Experiment 2: (concepts of array)

Q1)Write a C program to create methods for operations insertion, deletion, searching and display on 1D array of elements.

Experiment 3:(matrix)

Q1) Write a C program to create function for performing matrix multiplication.

Experiment-4: (pointer and DMA)

Q1) Write a program to store N numbers using dynamic memory allocation and then find the largest element using UDF.

Experiment 5:(structure and DMA)

Q1) Write a C program to create a structure called student to store your rollno, name, age. Create an array to input 5 students data and then create an UDF to display details where age \geq 20.

Experiment 6: (stack)

Q1) Write a program using C++ to create a stack and perform:
(i) push operation (ii) pop operation (iii) display operation

Experiment 7: (linear queue)

Q1) Write a C program to create a linear queue and perform the following operations: (i)insertion ii) deletion and iii) Traversal

Experiment 8: (circular queue)

Q1) Write a C program to create a circular queue and perform the following operations: (i)insertion ii) deletion and iii) Traversal

Experiment 9: (sorting)

Q1) write a program to implement bubble sort and selection sort on a list of array elements

Experiment 10: (sorting)

Q1) Write a program to implement linear and binary search on array elements using UDF

Experiment 11: (sorting)

Q1) write a program to implement insertion sort on a given list of array elements.

Experiment 12: (sorting)

Q1) Write a C program to implement quick sort to a given list of integers to sort in ascending order.

Experiment 13: (single linked list)

Q1) Write a C program that uses functions to perform the following operations on single linked list:

i) Insertion at beginning, ii) insertion at end, iii) insertion at node item, iv) Deletion of 1st node, v) deletion of last node, vi) deletion of a given node item, vii) search for a node item, iv) display all nodes

Experiment 14: (linked stack)

Q1) Write a C program that uses functions to implement linked stack on single linked list.

Experiment 15: (linked queue)

Q1) Write a C program that uses functions to implement linked queue on single linked list.

Text Books/ Reference Books:

1. Pai: "Data Structures & Algorithms; Concepts, Techniques & Algorithms" Tata McGraw Hill.
2. "Fundamentals of data structure in C" Horowitz, Sahani & Freed, Computer Science Press.
3. "Data structures through C in depth" by S. K. Srivastava, BPB Publications.

Subject Code	Title of the subject					L	T	P	C						
21BBSBS10002	Engineering Physics					3	0	0	3						
Course Educational Objectives															
CEO1	Providing fundamental knowledge about the oscillations and waves														
CEO2	Providing knowledge of mathematical concepts to solve electromagnetic problems														
CEO3	To familiar with structure and different properties of materials.														
CEO4	To attain fundamental information about Quantum mechanics with applications.														
Course Outcomes: Upon successful completion of this course, students should be able to:															
CO1	Understand and analyze the concept of oscillation and wave mechanics.														
CO2	Interpret the fundamentals of electromagnetism and deduce the electromagnetic wave equations.														
CO3	Describe the principle of lasing and optoelectronics devices in communication system.														
CO4	Explain the ideas of crystal structure, crystal diffraction and classification of materials.														
CO5	Express the basics of quantum mechanics and illustrate the quantum mechanical problems.														
CO-PO & PSO Mapping															
COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3	2													
CO2	2	2													
CO3	1	2													
CO4	1	2													
CO5	2	2													
SYLLABUS															
UNIT: 1 Oscillation, Wave and Optoelectronics											(14 Hours)				
Introduction to Oscillatory motion, Damped harmonic oscillation and its characteristics, Waves and its characteristics, Superposition of Waves, coherent and incoherent superposition, Interference of light waves, Newton's Ring experiment, diameter of rings, determination of wavelength of unknown light and refractive index of liquid. LASER, Lasing action and characteristics & application of laser beam, construction and working of He-Ne Laser, applications of Laser. Optical fiber, Acceptance angle, Numerical aperture, Step index and Graded index fibers, Attenuations in optical fibers, Block diagram of optical fiber communication systems and applications.															
UNIT: 2 Electromagnetic Theory											(12 Hours)				
Review of grad, divergence and curl, Gauss divergence theorem and Stoke's theorem (no derivations), fundamental laws of electrostatics, magneto-statics and electromagnetism, displacement current and conduction current, Maxwell's equations, Equation of continuity using Maxwell's Relations. Electromagnetic wave and its characteristics, electromagnetic wave equation for free space and in charge free conducting medium, electromagnetic energy and Poynting vector, Poynting theorem.															
UNIT: 3 Solid state Physics											(14 Hours)				
Crystal Structure: crystal direction and plane, Miller indices, Inter planar spacing, Reciprocal Lattice and its characteristics, Reciprocal Lattice of SC, FCC and BCC, Brillouin Zone, X-ray diffraction (Basic) & Bragg's law, Super Conducting Materials: Origin, type-1 and type-2, meissner's effect, critical magnetic field and current density, Applications. Magnetic Materials: Properties of Magnetic Materials types and applications. Di-electric Materials: Polar and non-polar dielectric, types of dielectric, piezoelectric, pyro-electric and ferroelectric, Applications. Nano Materials: (elementary ideas) Surface to volume ratio, graphene, carbon nano tubes and their applications.															

UNIT: 4 Quantum Mechanics**(12 Hours)**

Introduction to dual nature: Black body radiation, photoelectric effect, Compton effect (qualitative ideas only), de-Broglie's hypothesis, Heisenberg's uncertainty principle and its application to non-existence of electron inside the nucleus and ground state energy of one dimensional harmonic oscillator, Basic postulates of Quantum Mechanics, Wave function and its characteristics, probability density, normalization, eigen values, eigen functions and expectation values, Schrödinger's equation (time dependent and time independent). Application of Schrödinger equation to particle in a box and its Energy eigen values, Qualitative ideas on potential step and potential barrier with transmission probability.

Teaching Methods: Chalk & Board/ PPT/Video Lectures

Text Books:

1. *Engineering Physics* by D. K. Bhattacharya and Poonam Tanden, Oxford University Press.
2. *Engineering Physics*, H K Malik and A K Singh, Tata McGraw Hill, MGH.

Reference Books:

CO1	2		1	1											
CO2	2		1	1											
CO3	2		1	1											
CO4	2		1	2											

List of Experiments:

1. Determination of the acceleration due to gravity by using Bar/Kater's pendulum.
2. Verification of the laws of transverse vibration by using sonometer.
3. Determination of Rigidity modulus of a wire by Static/Dynamic method.
4. Determination of wavelength of light by Newton's Rings apparatus.
5. Determination of no. of lines of a diffraction grating plate.
6. Determination of slit width of a double slit.
7. Determination of plank's constant using photo-voltaic cell.
8. Determination of band gap energy of PN junction (Ge/Si) diode.
9. Determination of the resistivity of a semiconductor with temperature by four- probe method.
10. Determination of dielectric constant of given solid by Lecher wire method.

Add on Experiments

11. Determination of coefficient of Thermal conductivity (**K**) of a metal (Cu) by using Searle's apparatus.
12. Study of mono-chromaticity and divergence of the given laser beam.
13. Study of reflection and total internal reflection by optical fibers.
14. Study of B-H curve of ferromagnetic substance.
15. Study the Hall Effect.

Practical Text Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers.
3. A Text Book of Practical Physics, Indu Prakash and Ramakrishna, 11th Edition, 2011, Kitab Mahal, New Delhi.

Subject Code	Title of the subject		L	T	P	C										
21BBSBS10003	Engineering Chemistry		3	0	0	3										
Course Educational Objectives																
CEO1	To impart the knowledge of application of chemical sciences in the field of engineering															
CEO2	To give an idea about microscopic chemistry in terms of atomic and molecular orbitals.															
CEO3	The course aims at elucidating principles of applied chemistry in industrial systems, water treatment and engineering materials															
CEO4	To give detailed knowledge about the reactivity of metal with environment and its prevention from corrosion.															
CEO5	To enlighten the students with the applications of advanced materials.															
Course Outcomes: Upon successful completion of this course, students should be able to:																
CO1	The students will be able to analyze microscopic chemistry in terms of atomic and molecular orbitals.															
CO2	Identify suitable water treatments techniques for domestic and industrial purposes															
CO3	Differentiate various types of corrosion, and gain knowledge on control measures associated with corrosion															
CO4	Understand various types of polymers, their preparation along with applications															
CO-PO & PSO Mapping

CO4	3	3													
SYLLABUS															
Unit – I												[12 Hrs]			
<p>DC Circuits & Theorems: Introduction to electrical terminology; Ohm's Law, Equivalent Resistance, Series-parallel circuits, Star-delta transformation, Types of elements, Source conversion, Ideal and practical voltage & current sources; Kirchhoff's Law, Mesh and Nodal Analysis, Superposition theorem, Thevenin's theorem, Norton's theorem excited by independent sources.</p> <p>Single Phase AC Circuits: AC Fundamentals: RMS & Average value, Form and peak factors, Complex algebra, Concepts of reactance, Impedance and their representation, AC through pure R, L, C, series RL, series RC & series RLC circuit.</p>															
Unit – II:												[12 Hrs.]			
<p>Three-phase AC Circuits: Comparison between 1-ph & 3-ph AC circuit, Star & Delta connection, Relation between line and phase quantities.</p> <p>Magnetic Circuits: Magnetic flux, Magnetic flux density, Magnetic fields intensity, Relation between B & H, Reluctance, B-H curve, Analogy between Electric and Magnetic circuit, Leakage flux, Hysteresis loss, Eddy current loss.</p> <p>DC Machines: Introduction, Construction and working principle of DC generator and DC motor, Types of DC machine, EMF equation of DC generator.</p> <p>AC Machines: Construction and working principle of Single-phase Transformer, EMF equation, Transformation ratio, threephase Induction motor: Principle of operation, Rotating magnetic field, Types of rotors, Synchronous speed and slip, Introduction to 1-phase Induction motor.</p>															

Unit – III**[12 Hrs.]**

Semiconductor Diodes: Introduction; Ideal Diode; Semiconductor Materials; Energy Levels; Extrinsic Materials- n - and p -Type; Semiconductor Diode; Resistance Levels; Diode Equivalent Circuits; Half-Wave Rectification; Full-Wave Rectification.

Bipolar Junction Transistors: Introduction; Transistor Construction; Transistor Operation; Common-Base Configuration; Transistor Amplifying Action; Common-Emitter Configuration; Common-Collector Configuration.

Unit – IV**[12 Hrs.]**

Electronic Instrumentation: Introduction; Basic Principle; CRT Features; Block Diagram of Oscilloscope; Function Generator; Standard Signal Generator; Digital Multimeters.

Digital Electronics Fundamentals: Binary, Octal, Hexadecimal and Decimal Number System and their Conversion; Binary Arithmetic; 1's and 2's Complements; Axioms and Laws of Boolean Algebra; Reducing Boolean Expressions; Logic Gates; Boolean Expressions and Logic Diagrams.

Teaching Methods: Chalk& Board/ PPT/Video Lectures

Text Books:

1. D. P. Kothari and I. J. Nagrath, "Basic Electrical Engineering", Tata McGraw Hill, 2010.

Lab Code	Name of the Lab	L	T	P	C										
21BBSES10101	Basic Electrical and Electronics Engineering Laboratory	0	0	2	1										
Course Outcomes: Upon successful completion of this course, students should be able to:															
CO1	Experimentally verify the basic circuit theorems														
CO2	Measure power and power factor in ac circuits using different lamps														
CO3	Understand and identify different parts of AC and DC machines.														
CO4	Verify the characteristics of diodes, transistors, OP-amps, digital electronic components experimentally and able to use oscilloscope, signal generator to measure amplitude and frequency of different waveforms.														
CO5	Demonstrate the operating principle and VI characteristics of Semiconductor diode and transistor.														
CO-PO & PSO Mapping															
COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1		1	2												
CO2		2	2												
CO3		1	2												
CO4		2	2												
CO5		2	2												

SYLLABUS

List of experiments/demonstrations:

Electrical Part:

Observations & Demonstration:

- Basic safety precautions. Introduction and use of measuring instruments – voltmeter, ammeter, multi-meter, oscilloscope. Real-life resistors, capacitors and inductors.
- Demonstration of cut-out sections of machines: DC machine (commutator- brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winding - slip ring arrangement) and single-phase induction machine.

Experiments: (Any 5 Experiments) :

1. Verification of Superposition, Thevenin's & Norton's Theorem
2. Power factor improvement using capacitor for fluorescent lamp.
3. Calculation of current, voltage and power in series R-L-C circuit excited by single-phase AC supply and calculation of power factor.
4. Open Circuit Characteristics of a separately excited DC Shunt generator
5. Load Characteristics of DC shunt motor
6. Loading of a transformer: measurement of primary and secondary voltages and currents, and power.

Electronics Part: (Any 5 Experiments) :

1. Familiarization of electronic components and devices (testing of semiconductor diodes and transistors using digital multimeter)
2. Study and use of oscilloscope, signal generator to view waveforms and measure amplitude and frequency of a given waveform.
3. V-I characteristics of semiconductor diode and determining its DC and AC resistance.
4. Studies on half-wave and full-wave rectifier circuits without and with capacitor filter; recording of the waveforms and measurement of average and rms values of the rectifier output.
5. V-I characteristic of an n-p-n or p-n-p transistor, DC biasing the transistor in common-emitter configuration and determination of its operating point (i.e., various voltages and currents).
6. Studies on Logic gates (Truth table verification of various gates).

Subject Code	Title of the subject											L	T	P	C
21BBSES10002	Elements of Mechanical Engineering											3	1	0	4
Pre -Requisite: Math and Physics															
Course Educational Objectives															
CEO1:	To understand the basics of forces and force analysis.														
CEO2:	To apply the established engineering methods to complex engineering problem.														
CEO3:	To understand the fundamental Concepts of thermodynamics and to distinguish the components and working principle of heat engine and determine the COP of heat pump and refrigerator.														
CEO4:	To impart basic knowledge on automation and basic codes in CNC machining.														
Course Outcomes: At the end of the course, the student will be able to:															
CO1	Determine the resultant force and moment for given force system. Locate the centroid and compute MOI of composite plane sections.														
CO2	Evaluate the forces in members of trusses, frames and problems related to friction														
CO3	To understand the basics of thermodynamics and application of various Laws and gain knowledge on heat power energy systems and its applications.														
CO4	To enable the students to understand on CNC coding and flexible manufacturing system.														
CO-PO & PSO Mapping															
COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3	2													
CO2	3	2													
CO3	2	2													
CO4	3	3													
SYLLABUS															
UNIT:1												[10 hours]			
STATICS OF PARTICLES															
<p>Force System: Force, Parallelogram Law, Free body diagram, Determination of reactions, Lami's theorem, Principle of Transmissibility of forces. Moment of a force, Couple, Varignon's theorem, Resolution of a force into a force and a couple. Resultant of coplanar force system. Equilibrium of coplanar force system.</p> <p>Concept of Centre of Gravity: Basic definition of Centroid and centre of mass, Area Moment of Inertia, Perpendicular axis theorem and Parallel axis theorem, Radius of gyration</p>															
UNIT:2												[10 Hours]			
ANALYSIS OF TRUSSES AND FRICTION															
<p>Plane Truss: Perfect and imperfect truss, Assumptions and Analysis of Plane Truss by Method of joints and Method of section.</p> <p>Laws of Friction - Angle of Friction-Angle of Repose-Ladder and Wedge Friction, Numerical problems on ladder and free body diagram on analysis of wedge friction.</p>															

UNIT:3

[14 Hours]

Fundamental Concepts and Definitions: Definition of Thermodynamics, System, surrounding and universe, Macroscopic & microscopic point of view. Property, State, Path, process, Cyclic process, Density, Specific volume, Pressure, temperature. Thermodynamic equilibrium, Quasi-static process, concept of ideal gas, Work and heat transfer, Zeroth law. First law: First law of thermodynamics. Application of first law in non-flow and flow processes. Steady flow energy equation, limitation of first law. Second law: Thermal reservoir, Statements of second law, Heat engines, COP of heat pump and refrigerator. Carnot cycle. Basic concepts of power plant and IC engines. Numerical based on simple formula.

UNIT:4

[8 Hours]

Robotics and Automation

Basic concept of Robotics and its Classification, Numerical Control of machine tools, Introduction to CNC machine, Basic codes used in CNC, Introduction to Flexible manufacturing system.

Teaching Methods: Chalk& Board, PPT, Blended , Cut Model Demonstrations

Text Books:

1. Engineering Mechanics by S. S. Bhavikatti, K. G. Rajashekarappa, New Age International
2. Engineering Mechanics by R K Bansal, Laxmi Publications
3. Basic Mechanical Engineering by Agrawal&Agrawal, Wiley
4. Engineering Thermodynamics by P.K.Nag, McGraw Hill
5. Machine tool design by N.K Meheta, McGraw Hill, Third edition,2018
6. Computer aided Design and Manufacturing by Mikell P. Groover, McGraw-Hill Inc, 2007

Ref. Books:

1. S.Timoshenko, and D.H.Young, "Engineering Mechanics", Tata Mc-Graw Hill Book,5th edition
2. Engineering Mechanics: Statics by J.L Meriam , Wiley
3. Engineering Mechanics : Statics and Dynamics by R. C. Hibbler, Pearson
4. Thermodynamics An Engineering Approach by Cengel& Boles, McGraw Hill
5. An Introduction to Mechanical Engineering by Wickert & Lewis, Cengage Learning
6. Thermal engineering by domkundwar and kothandaraman, Dhanpatrai Publishing Company

Subject Code	Title of the subject	L	T	P	C										
21BBSHS10002	Human Values and Professional Ethics	2	0	0	2										
Course Educational Objectives															
CEO1	To help the students appreciate the essential complementarity between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity, which are the core aspirations of all human beings.														
CEO2	To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the Human reality and the rest of Existence. Such a holistic perspective forms the basis of Universal Human Values and movement towards value-based living in a natural way.														
CEO3	To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behavior and mutually enriching interaction with Nature.														
Course Outcomes: At the end of the course, the student will be able to:															
CO1	It ensures students sustained happiness through identifying the essentials of human values and skills.														
CO2	It facilitates a correct understanding between profession and happiness.														
CO3	It helps students understand practically the importance of trust, mutually satisfying human behavior and enriching interaction with nature.														
CO4	Ability to develop appropriate technologies and management patterns to create harmony in professional and personal life.														
CO-PO & PSO Mapping															
COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1							1	3	2			1			
CO2									2			2			
CO3							3	3	3			3			
CO4							2	3							
SYLLABUS															
UNIT 1: Course Introduction - Need, Basic Guidelines, Content and Process for Value Education. [8 Hrs]															
<ol style="list-style-type: none"> Understanding the need, basic guidelines, content and process for Value Education Self Exploration-what is it? - its content and process; „Natural Acceptance“ and Experiential Validation- as the mechanism for self exploration Continuous Happiness and Prosperity- A look at basic Human Aspirations Right understanding, Relationship and Physical Facilities- the basic requirements for fulfillment of aspirations of every human being with their correct priority Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario 															
UNIT 2: Understanding Harmony in the Human Being - Harmony in Myself! [6 Hrs]															
<ol style="list-style-type: none"> Understanding human being as a co-existence of the sentient „I“ and the material „Body“ Understanding the needs of Self („I“) and „Body“ Understanding the Body as an instrument of „I“ (I being the doer, seer and enjoyer) Understanding the characteristics and activities of „I“ and harmony in „I“ Understanding the harmony of I with the Body: <i>Sanyam</i> and <i>Swasthya</i>; correct appraisal of Physical needs, meaning of Prosperity in detail 															

UNIT 3: Understanding Harmony in the Nature and Existence - Whole existence as Co-existence. [6 Hrs]

1. Understanding the harmony in the Nature
2. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self-regulation in nature
3. Understanding Existence as Co-existence (*Sah-astitva*) of mutually interacting units in all-pervasive space
4. Holistic perception of harmony at all levels of existence

UNIT 4: Implications of the above Holistic Understanding of Harmony on Professional Ethics. [10 Hrs]

1. Natural acceptance of human values
2. Definitiveness of Ethical Human Conduct
3. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order
4. Competence in professional ethics:
5. Ability to utilize the professional competence for augmenting universal human order
6. Ability to identify the scope and characteristics of people-friendly and eco-friendly production systems,
7. Ability to identify and develop appropriate technologies and management patterns for above production systems.
8. Case studies of typical holistic technologies, management models and production systems

TEXT BOOK(s):

Title of the subject						
Subject Code		L	T	P	C	
21BBSES10004	Dietetics and Nutritions	2	0	0	2	

Course Educational Objective

CEO1: Graduates can understand the importance of diet for good health

CEO2: Graduates should know about balance diet, menu planning and critically evaluation of meal

Course outcomes: At the end of the course, the student will be able to:

CO1 Know about importance of health and balance diet

CO2 Understand about composition of human diet and their function

CO3 Acquire knowledge on role of vitamins and minerals in food

CO4 Get an idea about menu planning and critically evaluation of meal

COs	PROGRAMME OUTCOMES(POs)											
	1	2	3	4	5	6	7	8	9	10	11	12
CO1	2											
CO2		3										
CO3	1											2
CO4		2										

UNIT:1

10 Hours

Basic Aspects

A. Definition of the terms Health, Nutrition and Nutrients

B. Importance of food (Physiological, Psychological and social function of food) in maintaining good health.

C. Classification of nutrients, Balanced diet, food groups

Balanced Diet

- Definition
- Importance of balanced diet

D. RDA for various nutrients- age, gender, physiological state

UNIT:2

10 Hours

Macronutrients

Carbohydrates

- Definition
- Classification(Mono, di and polysaccharides)
- Dietary Sources
- Function- Excess

Lipids

- Definition
- Classification
- Dietary Sources
- Functions

Protein

- Definition
- Classification based upon amino acid composition
- Dietary sources
- Functions
- Methods of improving quality of protein in food(special emphasis on soya protein and whey protein)

Energy

- Definition of Energy and Units of its measurement (Kcal)
- energy contribution from macronutrients(carbohydrates proteins, and fat)
- Factors affecting energy requirements
- Concept of BMR, SDA
- Dietary Sources of energy
- Concept of energy balance and the health hazards associated with Underweight, Overweight

Water

- Definition
- Dietary Sources (visible, invisible)
- Function of water
- Role of water maintaining health (water balance)

UNIT:3

8 Hours

Macronutrients

A. Vitamins

- Definition and classification (water and fat soluble vitamins)
- Food Sources, function and significance of
 1. Fat soluble vitamins (Vitamin A, D, E, K)
 2. Water soluble vitamins (Vitamin C, Thiamine, Riboflavin, Niacin, Cyanocobalamin and Folic acid)

B. Minerals

- Definition and classification (major and minor)
- Food Sources, functions and significance of calcium, Iron, Sodium, Iodine and Fluorine

UNIT:4

6Hours

Digestion and Absorption

Mechanical and Chemical breakdown of food

Menu Planning

- Planning of nutritionally balanced meals based upon the three food group system
- Factor affecting food planning
- Critical evaluation of few meals served at the Institutes/Hotels based on the principle of meal planning
- Calculation of proximate principles and energy of 3 Indian and 3 Conti lunch menus
- Critical evaluation and suggested improvement.

Teaching Methods: Chalk& Board/ PPT/Video Lectures/Lecture by Industry Expert/MOOCs

Text Books

1. Food Science and nutrition- Sunetra Roday
2. Food hygiene and sanitation -Sohna Roda
3. Nutrition and Dietetics by Shubhangini A. Joshi

Ref. Books

1. Food Science- Porter and Hotchkin
2. Advanced Nutrition and Dietetics in Nutrition Support
Editor(s):Mary Hickson PhD RD,, Sara Smith PhD RD,, Kevin Whelan PhD RD FBDA,

SUBJECT CODE	TITLE OF THE SUBJECT	L	T	P	C
21BBSES10106	Engineering Workshop	1	0	2	2

Pre Requisite: Concept of Measurement and dimension.

Course Educational Objectives:

CEO1	To learn the different types of hand and machine tools for various industrial application.
CEO2	To familiarize with the basic manufacturing processes and to study various tools and equipment used hands on training is given in different sections.
CEO3	To know principle of metrology and measurement in industries.
CEO4	To develop basic principles and devices involved in measuring and surface textures.

Course Outcomes: Upon successful completion of this course, students should be able to:

CO1	Understand various safety precautions and identify the use of different hand tools, machine tools and their operation.
CO2	Demonstrate the process configuration and basic mechanism of different machines like Lathe, Shaper, Milling machine, Drilling machine, Grinding machine and CNC.
CO3	Apply welding and fabrication knowledge and skills to meet expectation of various industries.
CO4	Identify various measuring tools and device such as Sine bar, Slip gauge, Surface roughness tester, and express error of various measuring devices.

CO-PO & PSO Mapping

COs	PROGRAMME OUTCOMES												PSOs	
	1	2	3	4	5	6	7	8	9	10	11	12	1	2
CO1	1			1										
CO2	2			2										
CO3	1			3										
CO4	1			3										

Minimum:10 Experiments

Unit 1

Safety Precaution: To study the various Safety precautions in workshop.

Fitting :

Study of different hand tools and Machine tools used in fitting.

Unit 2

Machining:

Study of various components and working principle of lathe machine

Preparation of a cylindrical job by lathe (Facing, Taper turning, Step Turning, knurling)

Study on Shaper and Milling Machine.

Overview to CNC Lathe machine.

Unit 3

Welding Practice :

Hands on practice on Electric Arc Welding to prepare Lap Joint, Butt Joint, T Joint and Corner Joint.

Preparation of Lap joint with the help of Oxyacetylene Gas welding.

Unit 4

Measurement and Calibration :

Measurement of length, height and diameter by Vernier caliper and Micrometer

Angular measurement by using sine bar.

Measurement of flatness of surface plate by using spirit levels.

Measurement of surface roughness using surface roughness tester.

Calibration of LVDT using indicator / CRO

Calibration of load cell using electrical resistance strain gauge.

Calibration of thermocouples.

Teaching Methods: Chalk & Board, Hands on practice.

Text Books:

1. Elements of Workshop Technology, Vol. I and II by Hajra choudhary, Khanna Publishers (7th Edition 2011)
2. Workshop Technology by WAJ Chapman, Viva Books (5th Edition 1985)

Engineering Metrology R.K. Jain, Khanna Publication (7th Edition 2018).

SUBJECT CODE	TITLE OF THE SUBJECT											L	T	P	C
21BBSES10105	Engineering Graphics & Design Lab											1	0	2	2
Pre -Requisite:															
Course Educational Objectives															
CEO1	To enable students to acquire and use engineering drawing skills as a means of accurately and clearly communicating ideas, information and instructions														
CEO2	To enable students to acquire requisite knowledge, techniques and attitude required for advanced study of engineering drawing and basic of AUTOCAD.														
Course Outcomes: Upon successful completion of this course, students should be able to:															
CO1	Able to prepare the orthographic projections of points and straight lines placed in various quadrants														
CO2	Demonstrate the ability to draw orthographic projections of various solids.														
CO3	Ability to draw and interpret the sectioned views of solids														
CO4	To provide students with adequate knowledge and experience in preparing engineering drawings using AutoCAD														
CO-PO & PSO Mapping															
COs	PROGRAMME OUTCOMES												PSOs		
	1	2	3	4	5	6	7	8	9	10	11	12	1	2	
CO1	2			2											
CO2	2			3											
CO3	2			3											
CO4	3			3											
Unit 1															
Introduction: Drawing Instruments and their uses, BIS conventions, Types of line, Dimensioning line Conventions.															
Orthographic Projections :															
Introduction, Definitions - Planes of projection, reference line and conventions employed, Projections of points in all the four quadrants, Projections of straight lines (located in First quadrant/first angle only), True and apparent lengths, True and apparent inclinations to reference planes. 1-Sheet															
Unit 2															
Orthographic Projections of Plane Surfaces (First Angle Projection Only):															
Introduction, Definitions-projections of plane surfaces-triangle, square, rectangle, rhombus, pentagon, hexagon and circle, planes in different positions by change of position method 1-Sheet															
Projections of Solids (First Angle Projection Only) :															
Introduction, Definitions - Projections of right regular tetrahedron, hexahedron (cube), prisms, pyramids, cylinders and cones in different positions. 1-Sheet															
Unit 3															
Sections and Development of Lateral Surfaces of Solids:															
Introduction, Section planes, Sections, Section views, Sectional views, Apparent shapes and True shapes of Sections of right regular prisms, pyramids, cylinders and cones resting with base on HP. 1 - Sheet															

Unit 4**AUTO CAD:**

Layout of the software, standard tool bar/menus and description of most commonly used toolbars, navigational tools. Co-ordinate system and reference planes. Definitions of HP, VP, RPP & LPP. Creation of 2D/3D environment. Selection of drawing size and scale. Commands and creation of Lines, Co-ordinate points, axes, poly-lines, square, rectangle, polygons, splines, circles, ellipse, text, move, copy, off-set, mirror, rotate, trim, extend, break, chamfer, fillet, curves, constraints.

Teaching Methods: Chalk& Board, Computer software(AUTO CAD)
